PROJECT DOCUMENTATION

Import Data Using Transform Maps (Spreadsheets)

Complete project planning, team responsibilities, problem–solution fit, and required resources for ServiceNow transform map implementations.

1. PROJECT PLANNING PHASE

Project Objectives

- Develop automated spreadsheet import pipeline via ServiceNow.
- Enforce RBAC & ACL security on staging and transform maps.
- Implement Read, Write, and Execute transformation permissions.
- Prevent duplicate records using Coalesce field logic.
- Maintain full transformation run activity logs.

Project Scope

- Spreadsheet upload & Staging Table creation
- Transform Map configuration & script mapping
- Role & ACL permission governance
- Error handling, validation & logging
- Administrative dashboard monitoring

TEAM RESPONSIBILITIES

Team Member	Responsibility
A.M.AFRA SHIREEN BANU	Team Leader & Project Coordination, Final Demonstration
M.BRUNDHA	Requirement Analysis & Data Schema Design
K.KAVIYA	UI / Application & Data Source Design
C.DHANUSHA	ServiceNow Transform Map & Script Development
R.DHARANIKA	Testing, ACL Configuration & Documentation

PROJECT ACTIVITIES & PHASES

Phase	Activity Description
1	Problem Identification & Spreadsheet Import Gap Analysis
2	Requirement Analysis & Staging Table Schema Mapping
3	Solution & Architecture Design Phase
4	ServiceNow Transform Map & Scripting Development
5	ACL Security & Role-Based Access Configuration
6	Data Validation Testing, Documentation & Presentation

RESOURCES REQUIRED

- ServiceNow Personal Developer Instance (PDI)
- ServiceNow Studio
- JavaScript (Transform Scripts & Field Mapping Logic)
- ServiceNow Tables (Staging Tables & Target Tables)
- ACL and RBAC (Role-Based Access Control)
- Internet connection & Documentation tools

3. PROBLEM–SOLUTION FIT

Identified Problem	Implemented Solution
Unauthorized spreadsheet data ingestion	ACL-based staging table access control
Excessive user permissions on target tables	Role-based permissions (`import_admin`)
Unauthorized modification of transform maps	Write permission restriction on Transform Maps
Unauthorized transformation script execution	Execute permission control on Transform Engine
Difficulty tracking import errors & changes	Comprehensive System & Transform Run logs

Expected Deliverables

A functional Transform Map data import application in ServiceNow that securely manages spreadsheet data ingestion, enforces ACL and RBAC permissions, performs coalesce-based record updates, and generates activity logs for administrative auditing.
