ServiceNow Data Import, Reporting & Dashboard Guide

Phase 1: Prepare the Source Spreadsheet

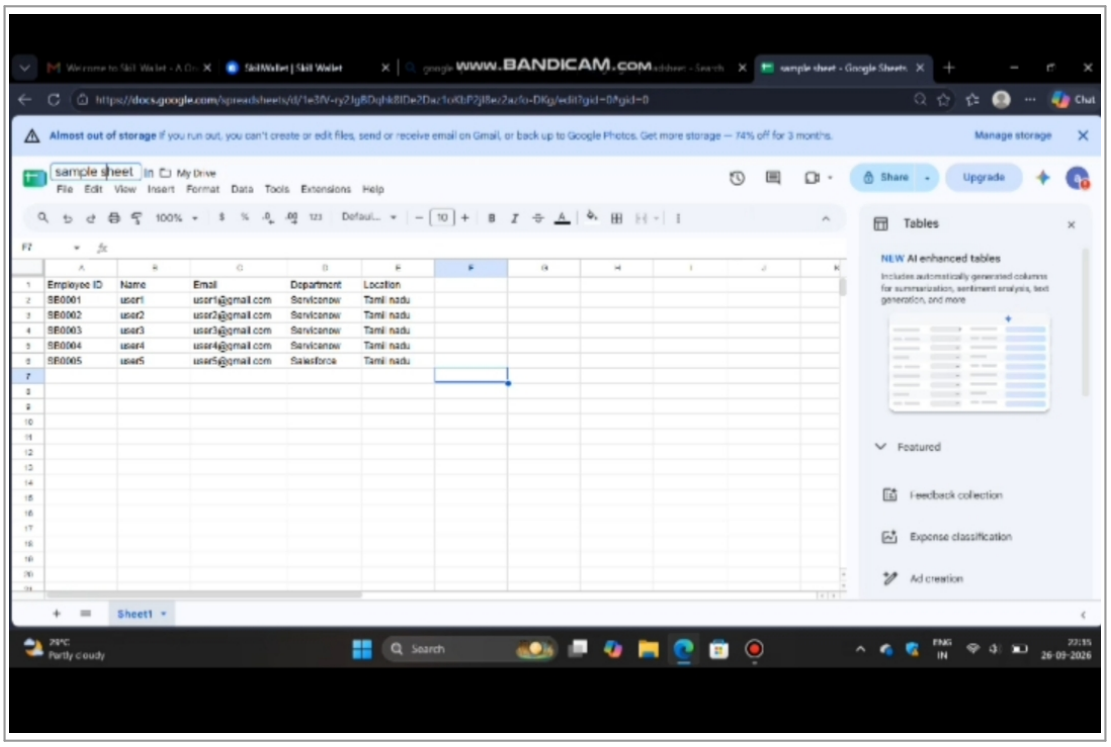

1. Open the project **Import Data Using Transform Maps** in Skill Wallet and click **Access Resource**.

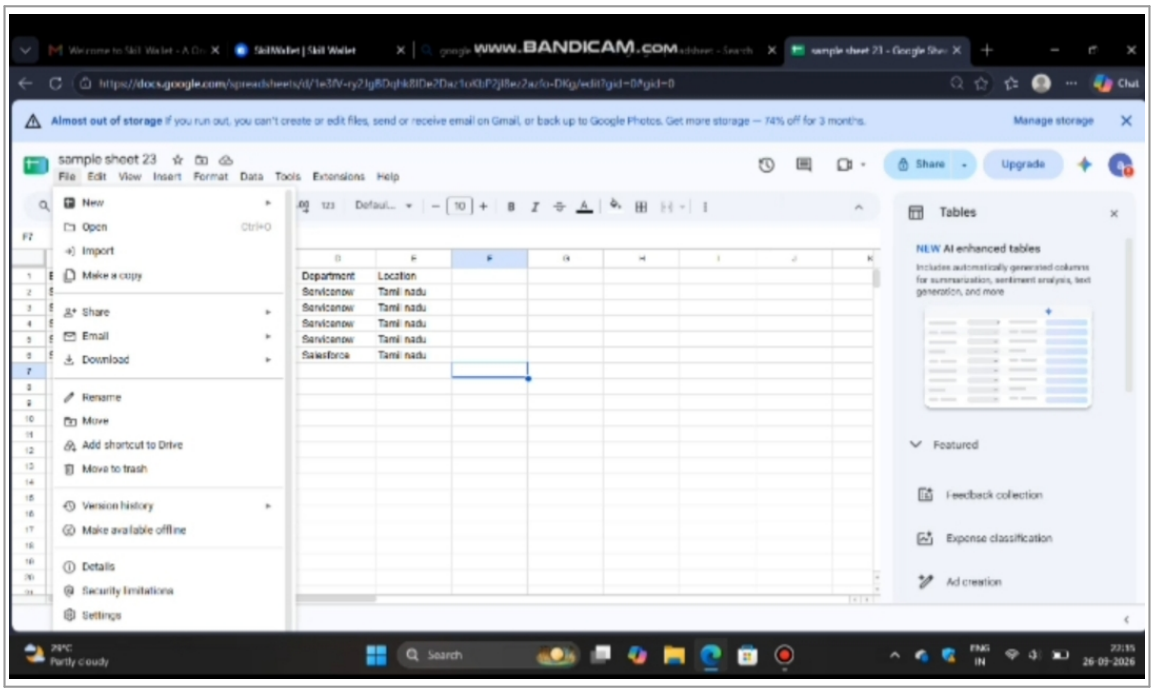

2. Create a new Google Sheet and add the column headers in row 1: **Employee ID, Name, Email, Department, Location**.

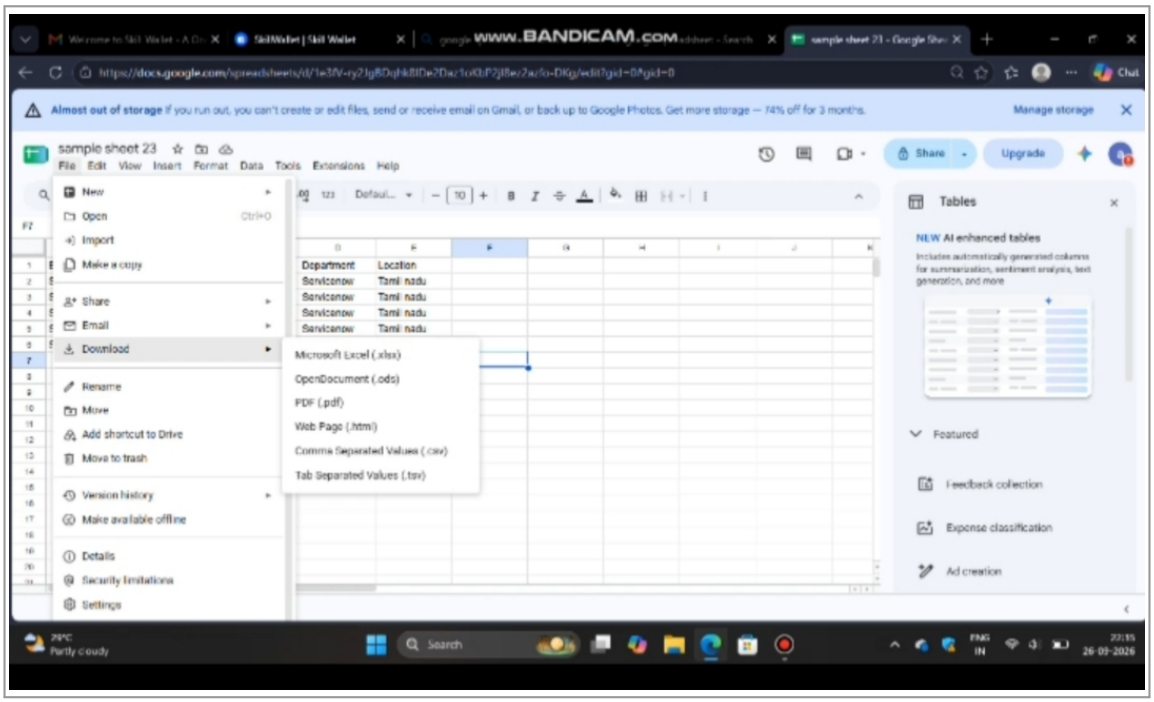

3. Fill in the sample employee records and rename the file to `sample sheet`.

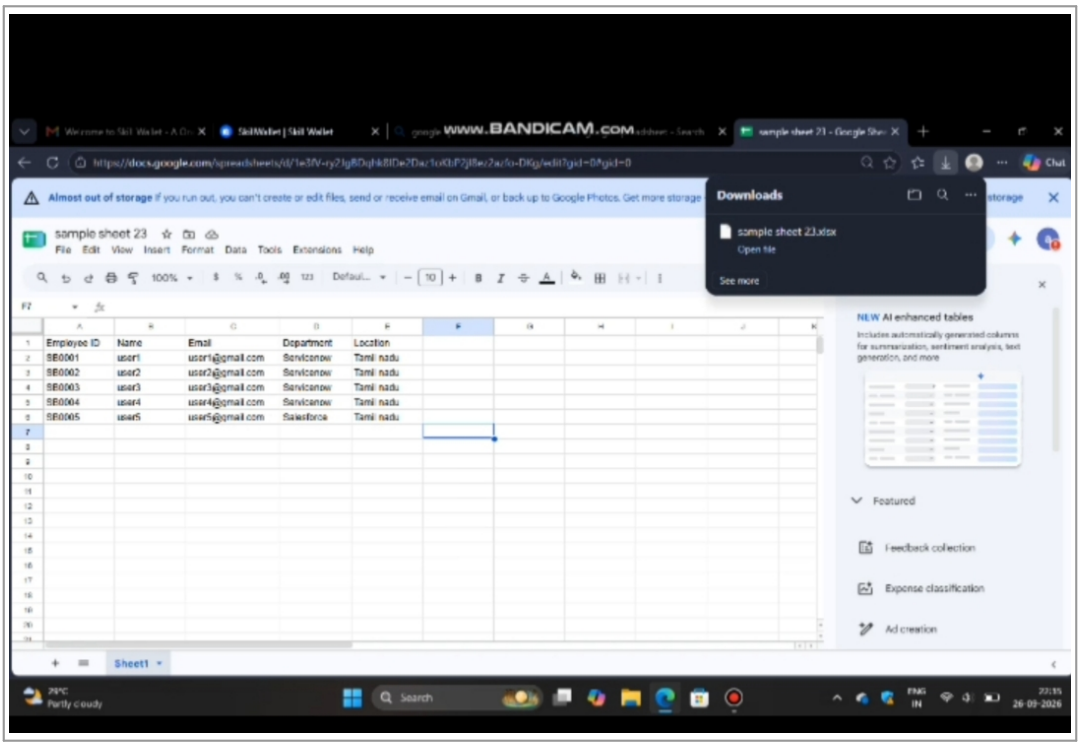

4. Click **File** in the menu bar and select **Download**.

5. Choose **Microsoft Excel (.xlsx)** from the download formats.

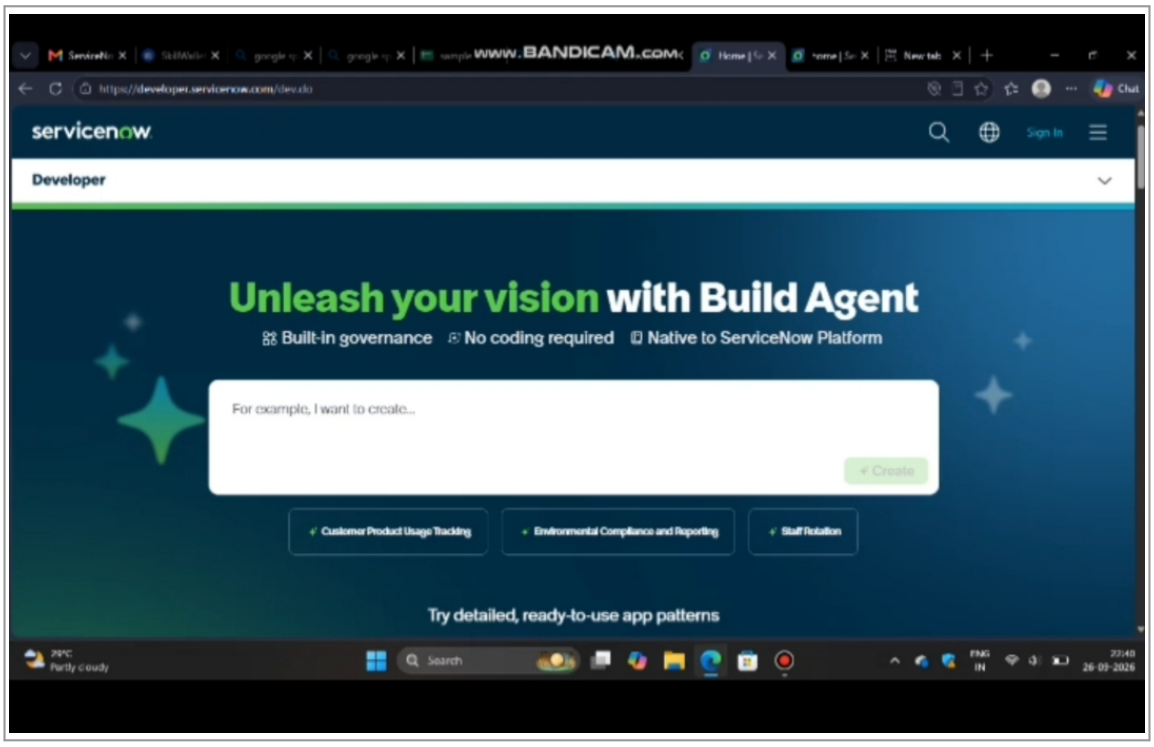

6. Confirm the `.xlsx` file has downloaded successfully.

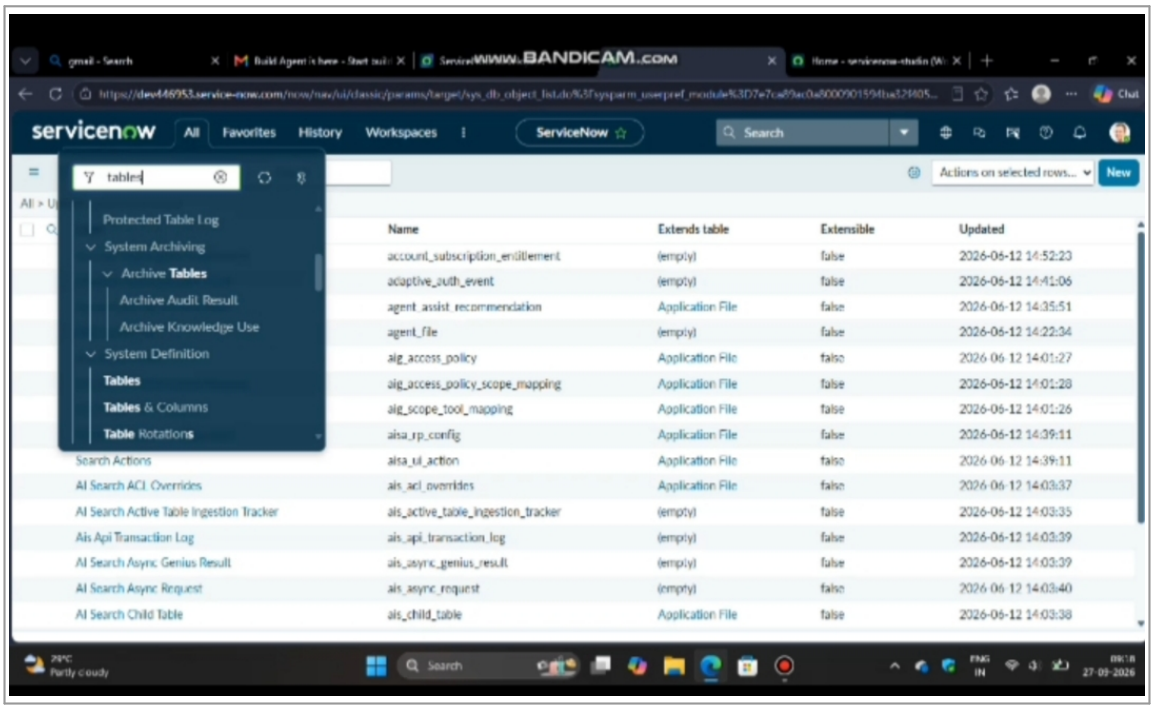

Phase 2: Create the Employee Test Table & Fields

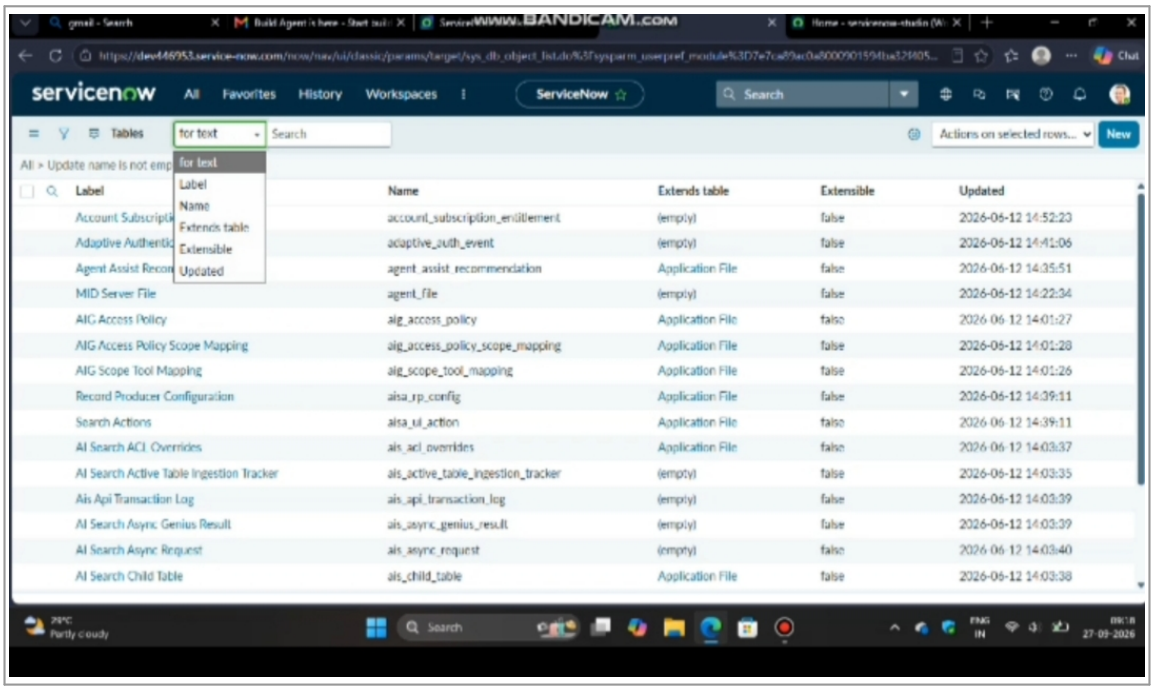

1. Open the ServiceNow Developer site and sign in to your personal developer instance.

2. In the Application Navigator, search for `tables` and select **Tables** under System Definition.

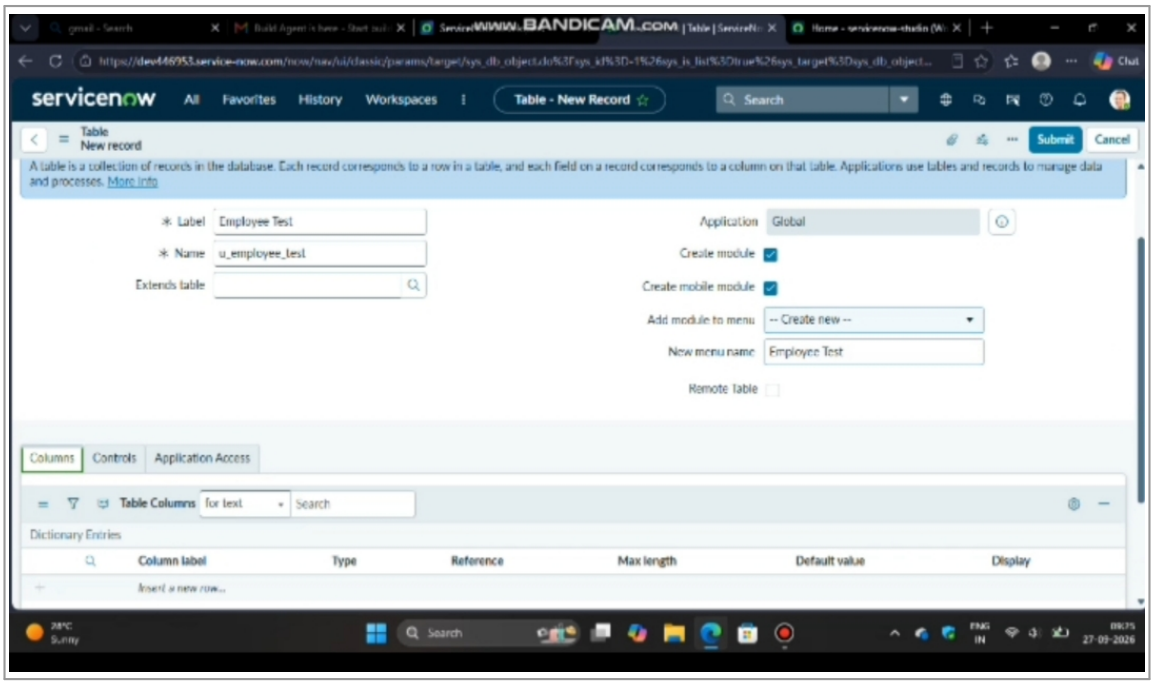

3. In the Tables list, click **New** (top right) to create a table.

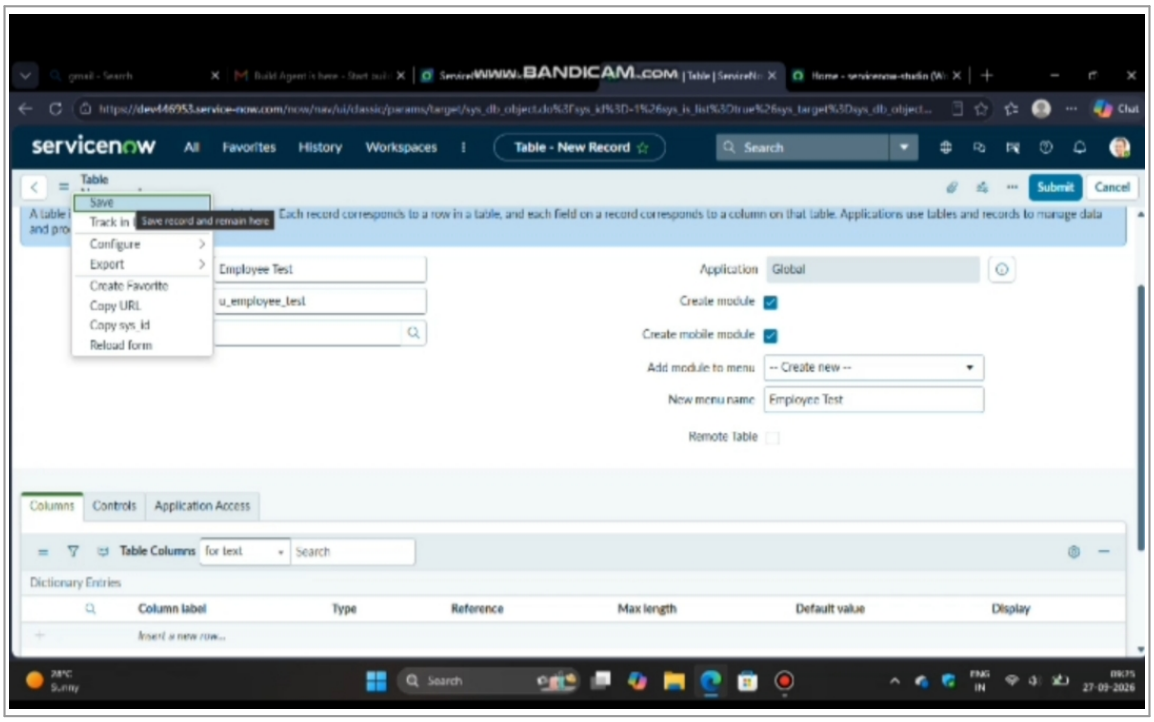

4. Fill in the new table details:

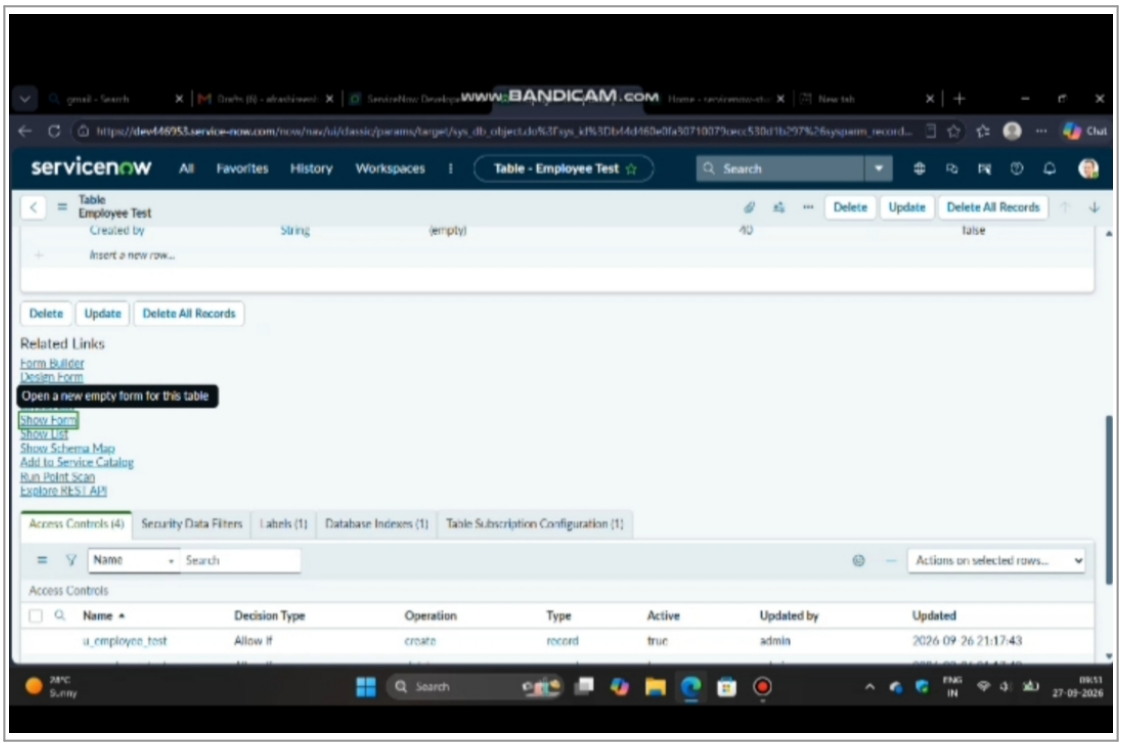

- **Label:** Employee Test
- **Name:** u_employee_test
- **Application:** Global
- Tick **Create module** and **Create mobile module**
- **Add module to menu:** -- Create new --, with **New menu name:** Employee Test

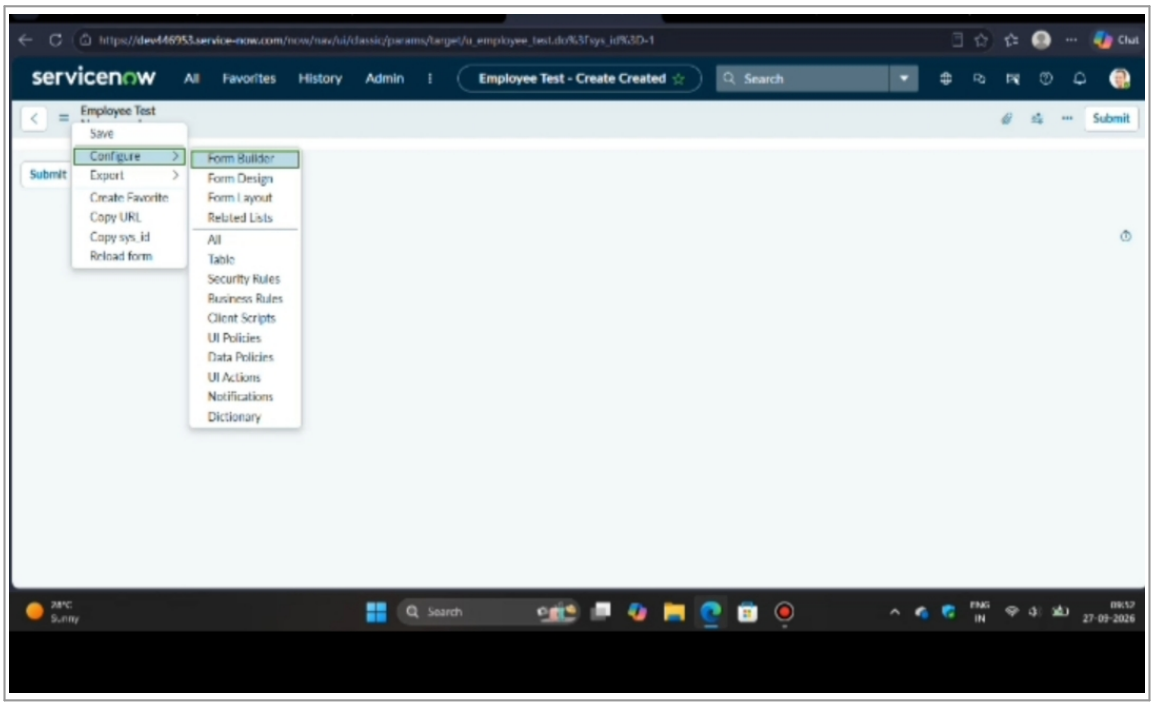

5. Open the form header menu and click **Save** to save the record and stay on the page.

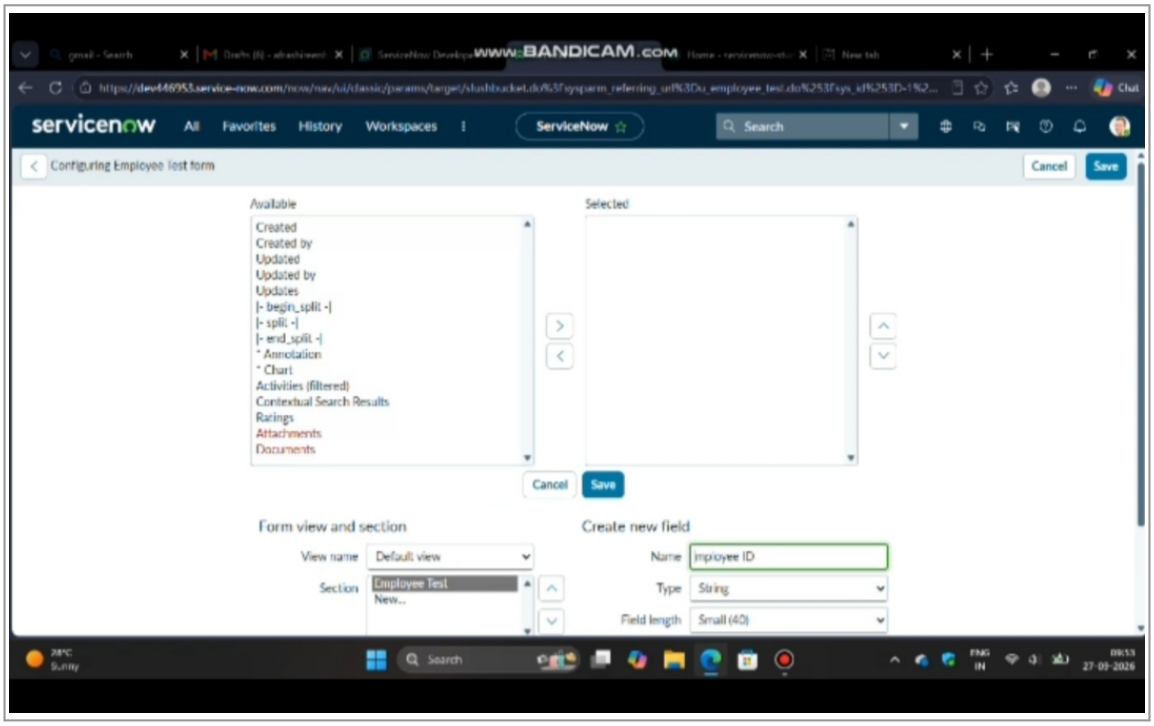

6. Scroll down to **Related Links** and click **Show Form** to open a new empty form for the table.

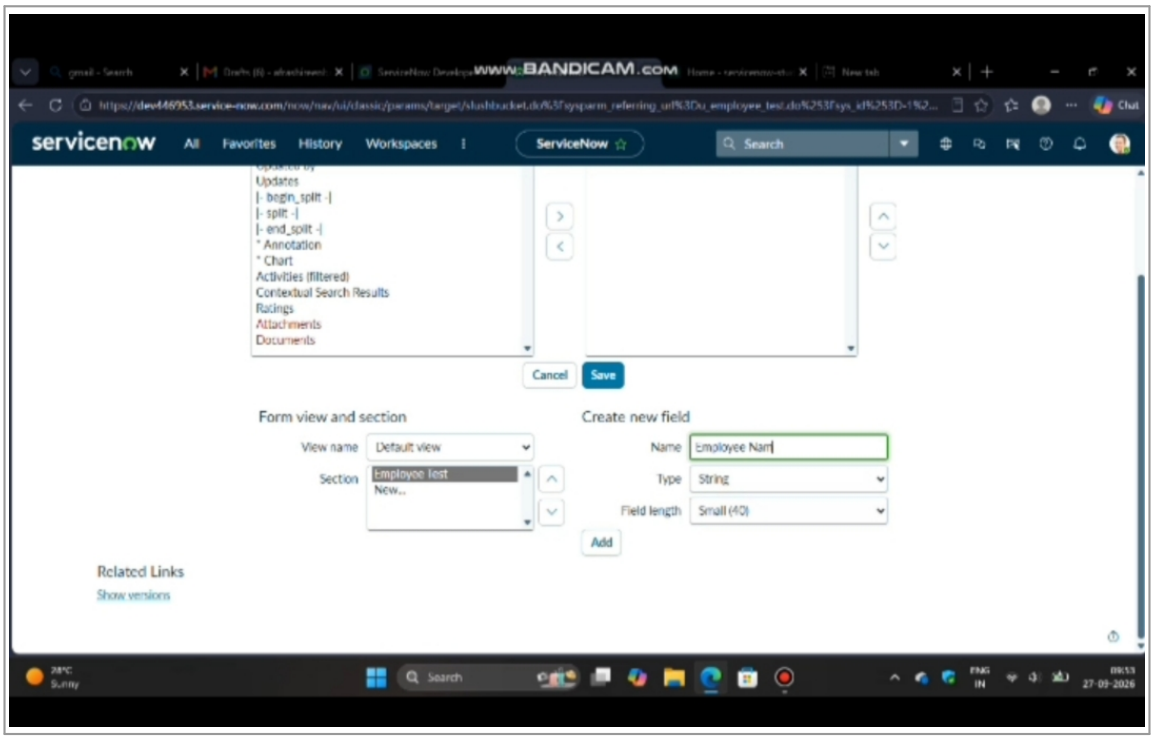

7. On the Employee Test form, open the header menu and go to **Configure** > **Form Builder**.

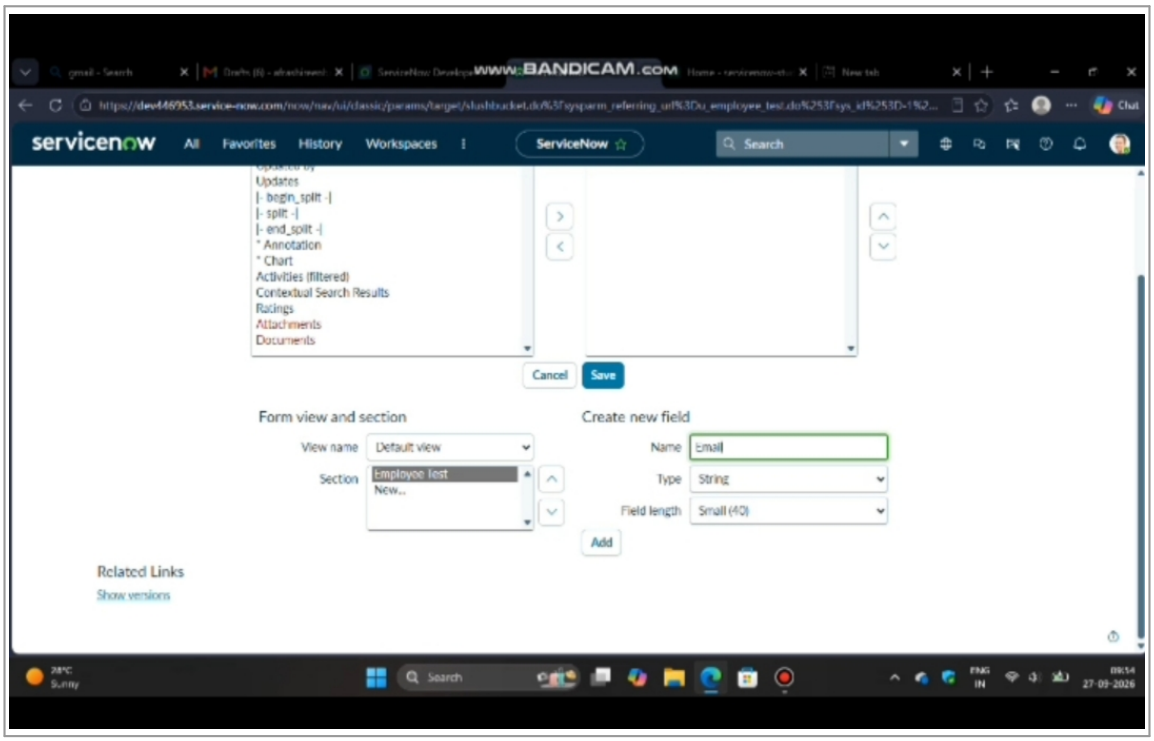

8. Under **Create new field**, enter the field name, keep **Type** as String and **Field length** as Small (40), then click **Add**. Start with **Employee ID**.

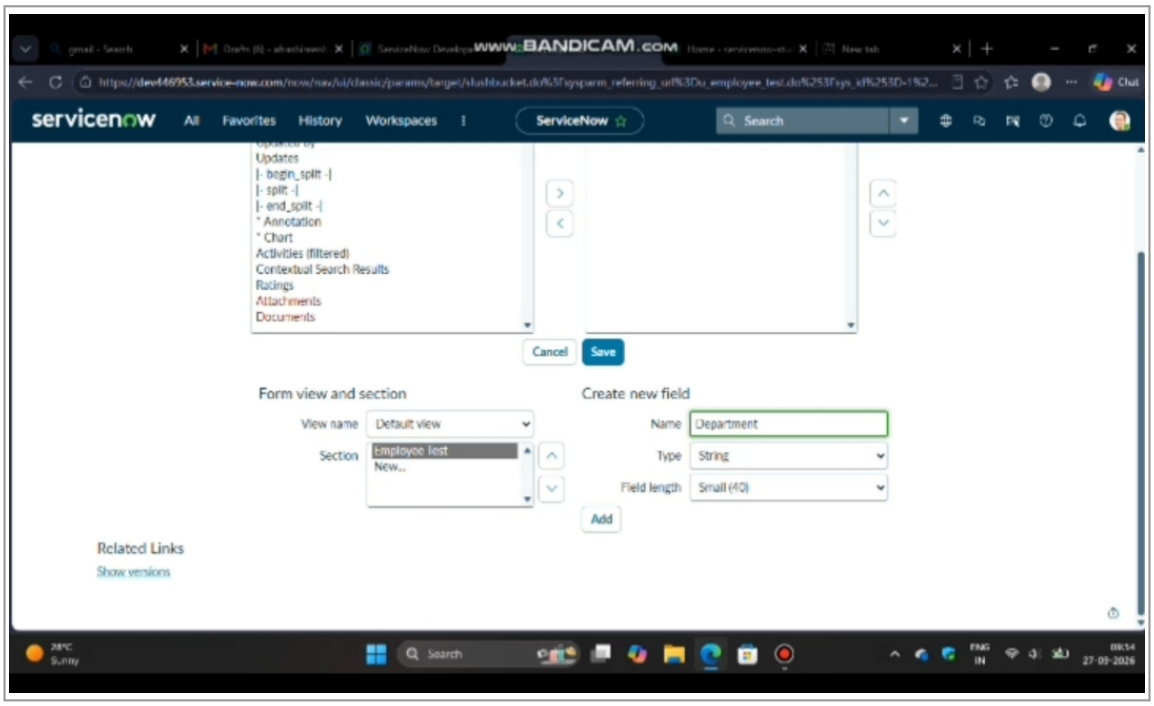

9. Repeat for **Employee Name**.

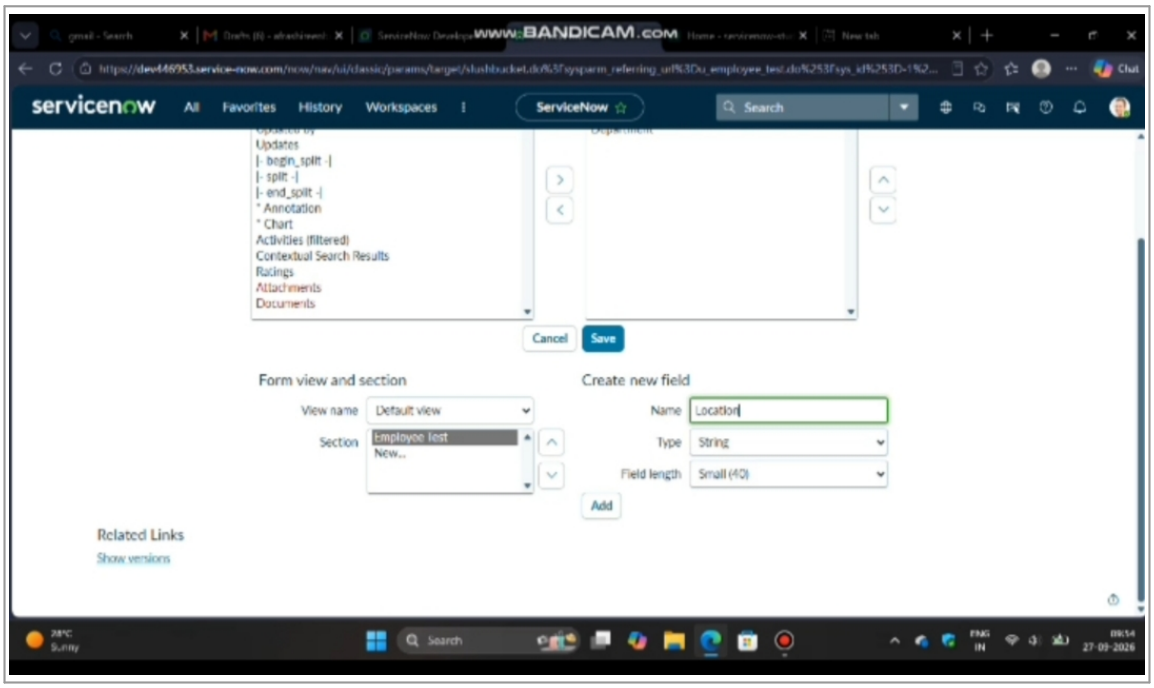

10. Repeat for **Email**.

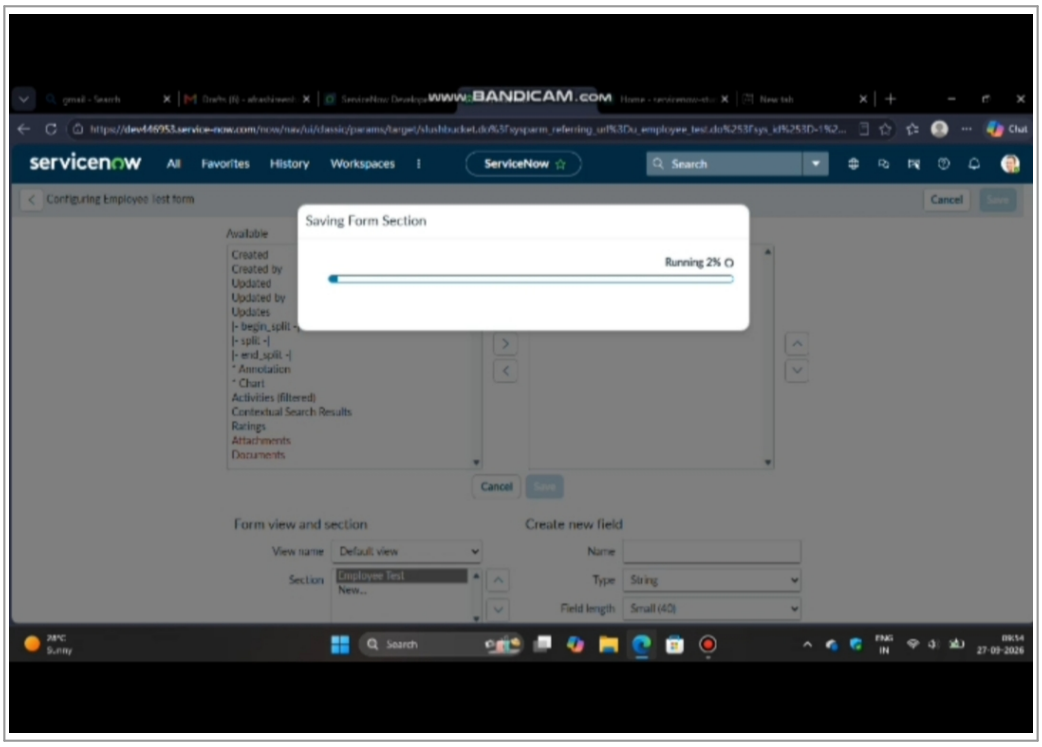

11. Repeat for **Department**.

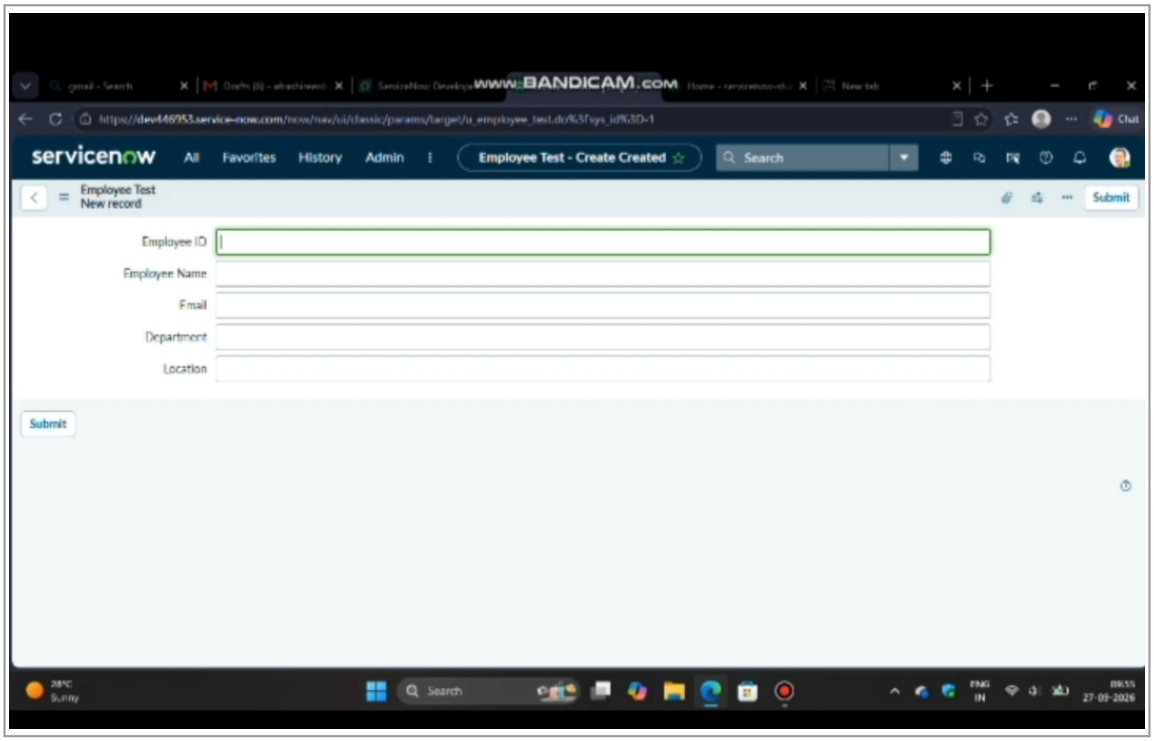

12. Repeat for **Location**.

13. Click **Save** and wait for the *Saving Form Section* progress dialog to finish.

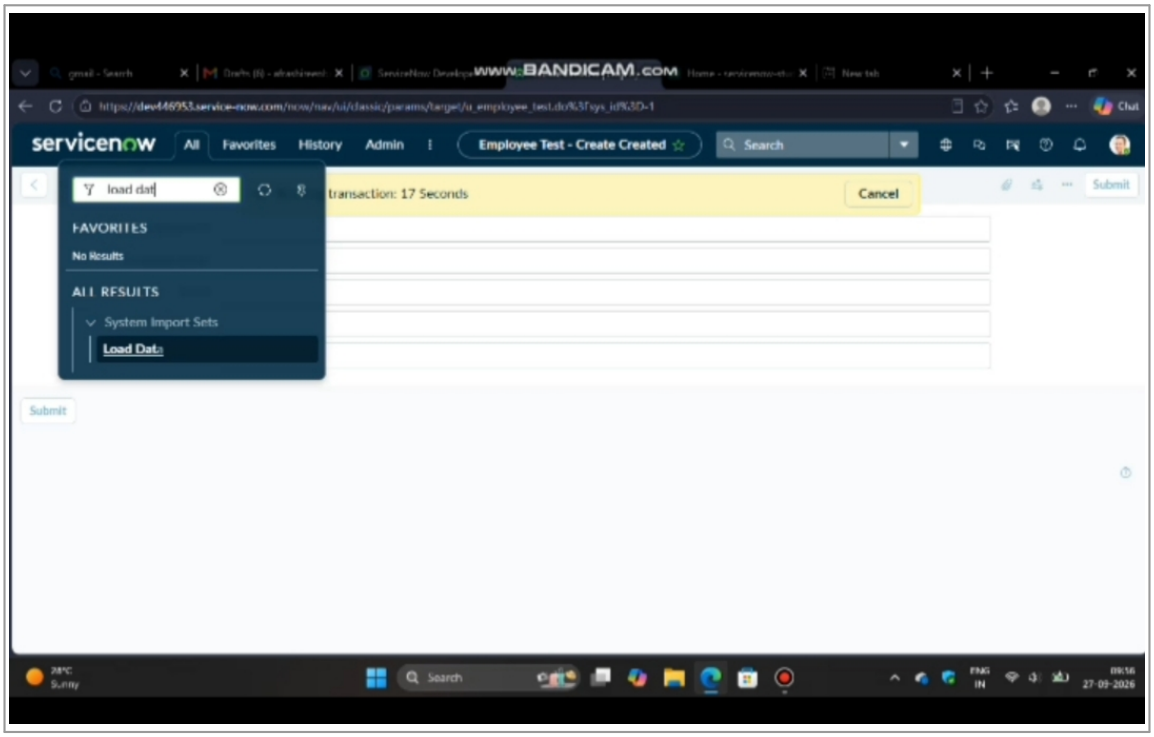

14. Open the Employee Test form again to confirm it now shows all five fields: Employee ID, Employee Name, Email, Department and Location.

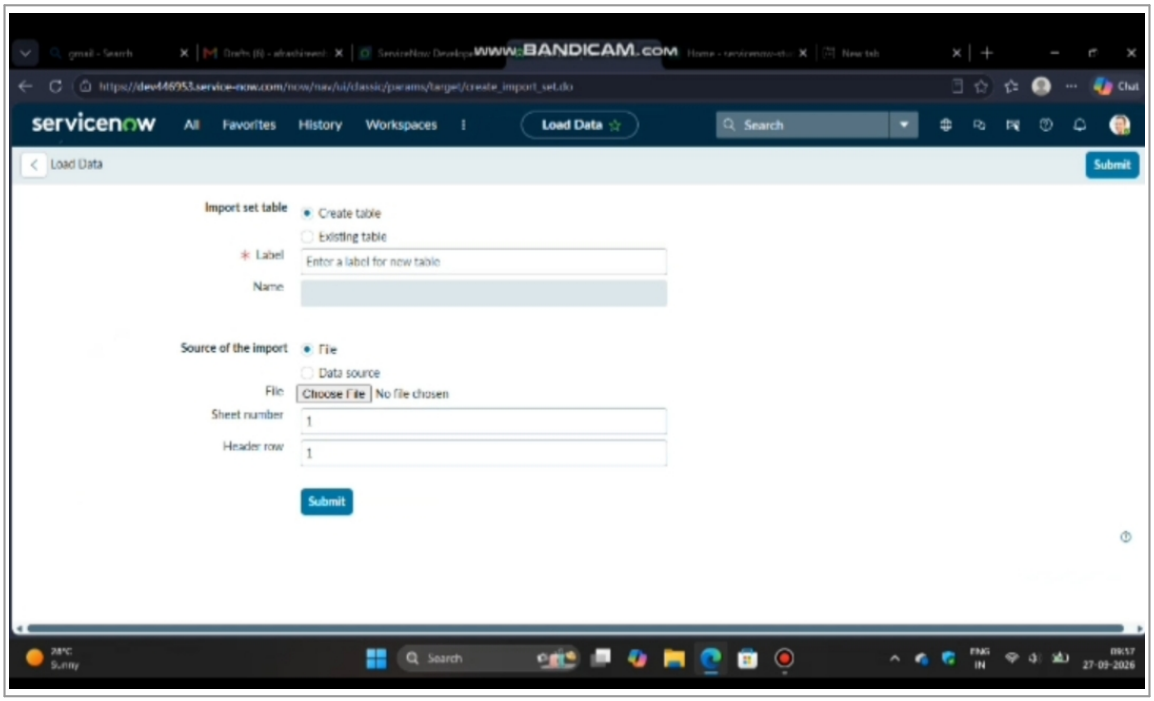

Phase 3: Load the Spreadsheet into an Import Set

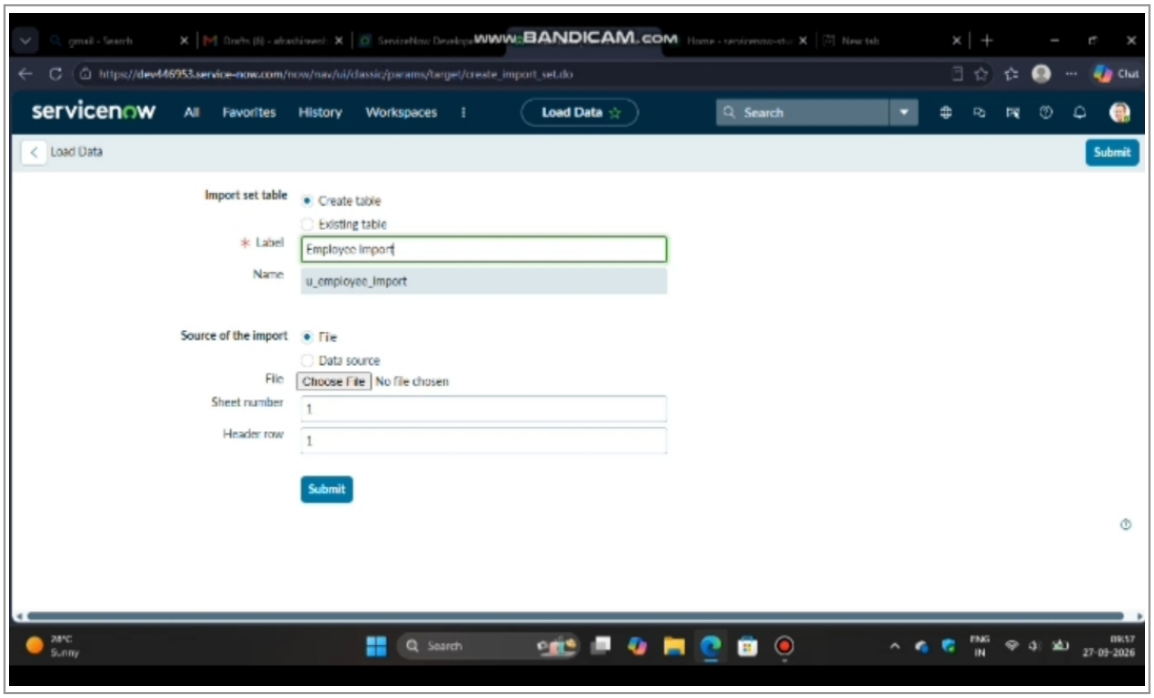

1. In the Application Navigator, search for `load data` and select **Load Data** under System Import Sets.

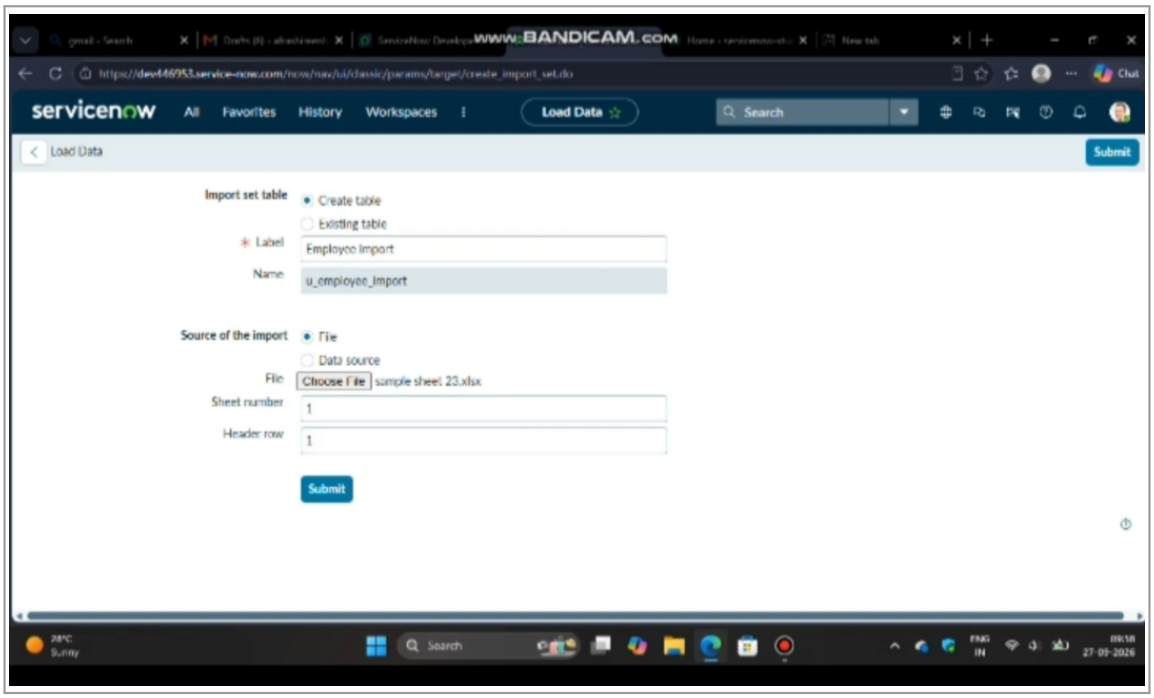

2. The Load Data form opens. Keep **Import set table** as *Create table*, **Source of the import** as *File*, and leave **Sheet number** and **Header row** as 1.

3. Enter the **Label** `Employee Import`; the table **Name** fills in automatically as `u_employee_import`.

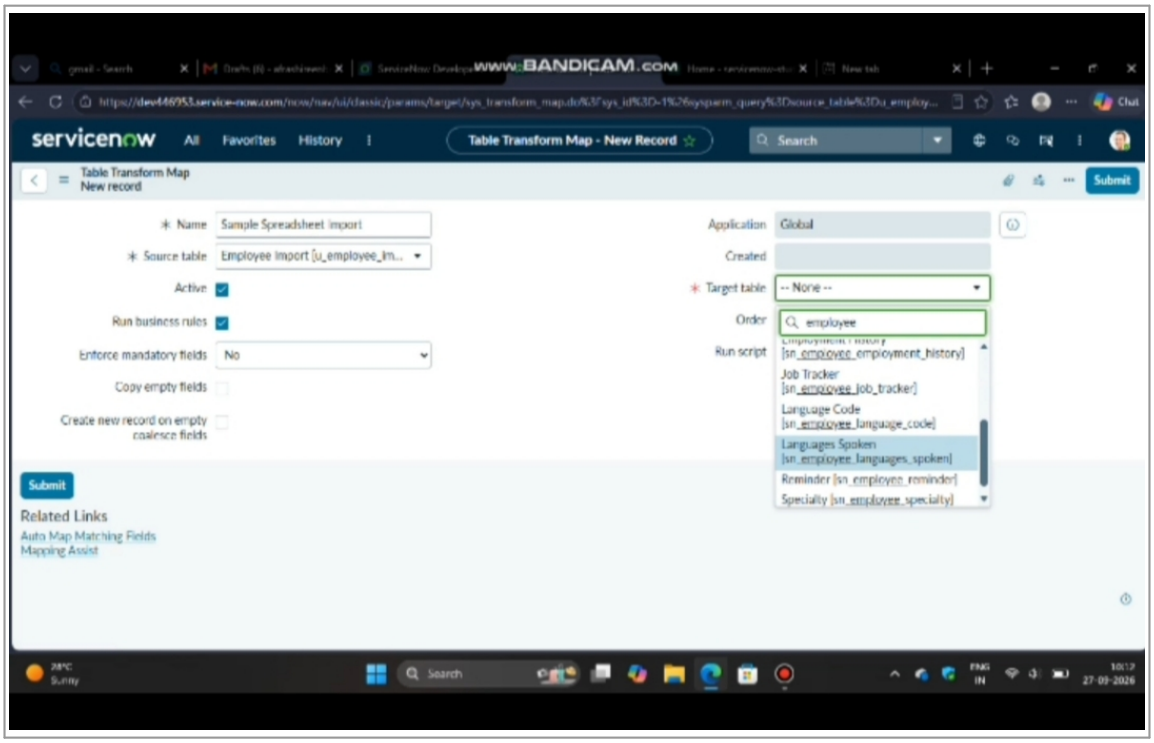

4. Click **Choose File**, select the downloaded `sample sheet 23.xlsx` file, and click **Submit**.

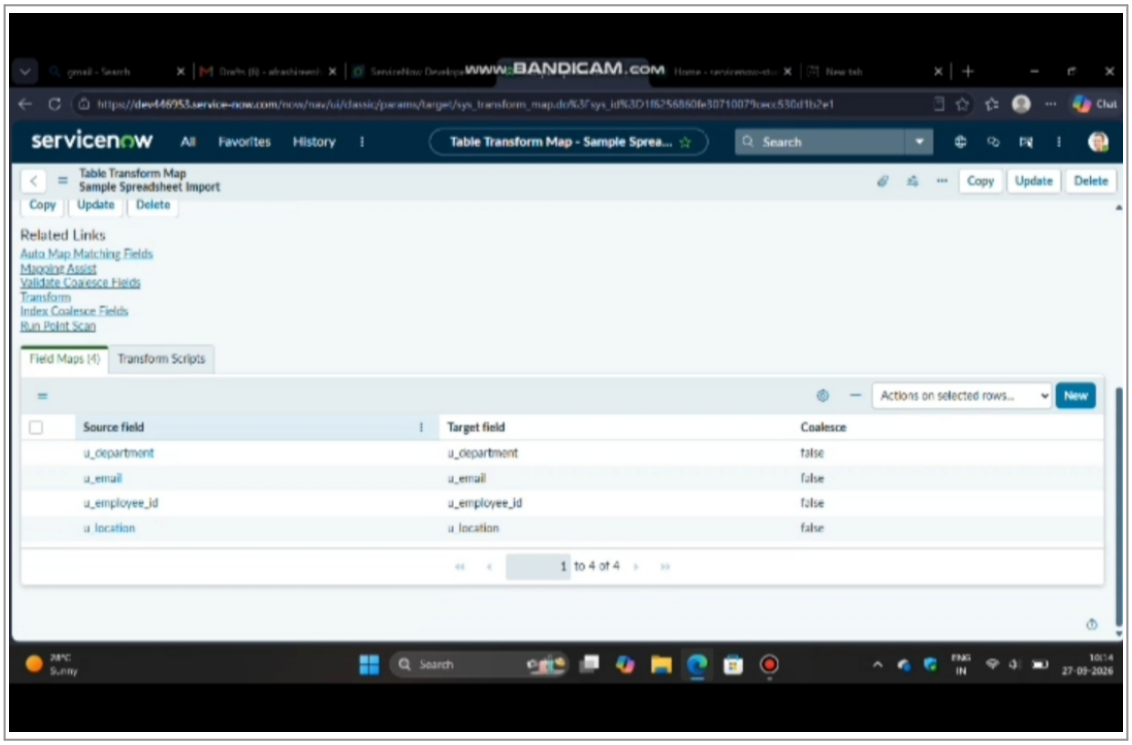

Phase 4: Create the Transform Map & Field Mappings

1. Create a new **Table Transform Map** and fill in the details, then choose the target table:

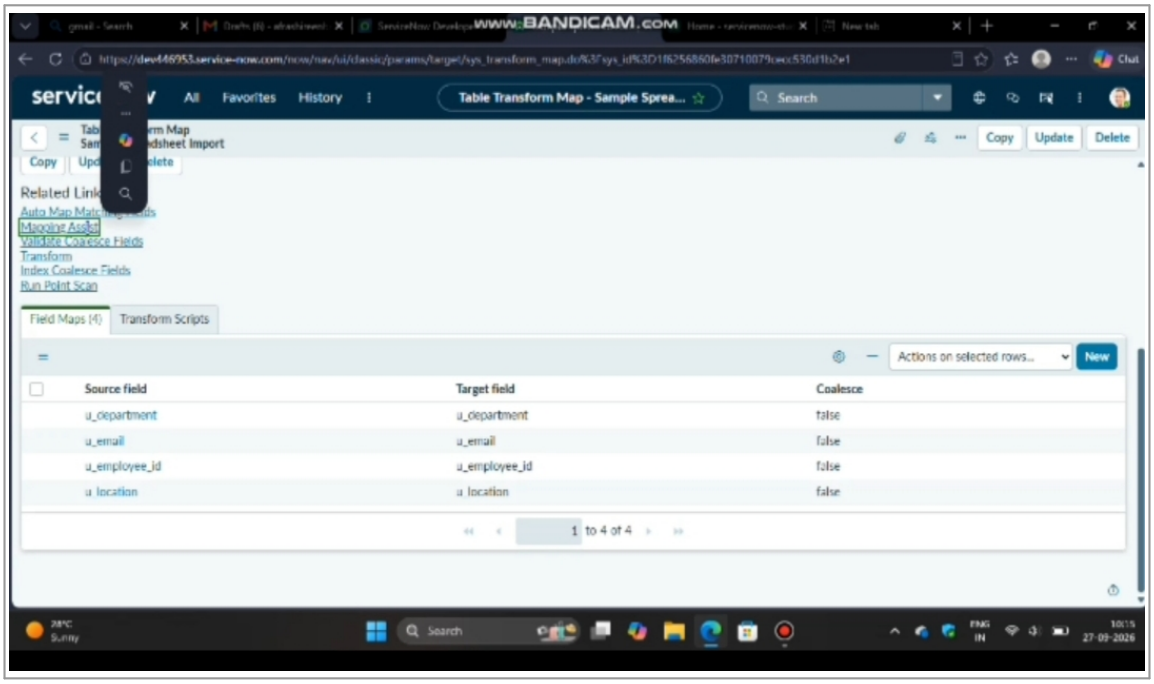

- **Name:** Sample Spreadsheet Import
- **Source table:** Employee Import [u_employee_import]
- **Active** and **Run business rules** ticked; **Enforce mandatory fields:** No
- **Target table:** Employee Test [u_employee_test]

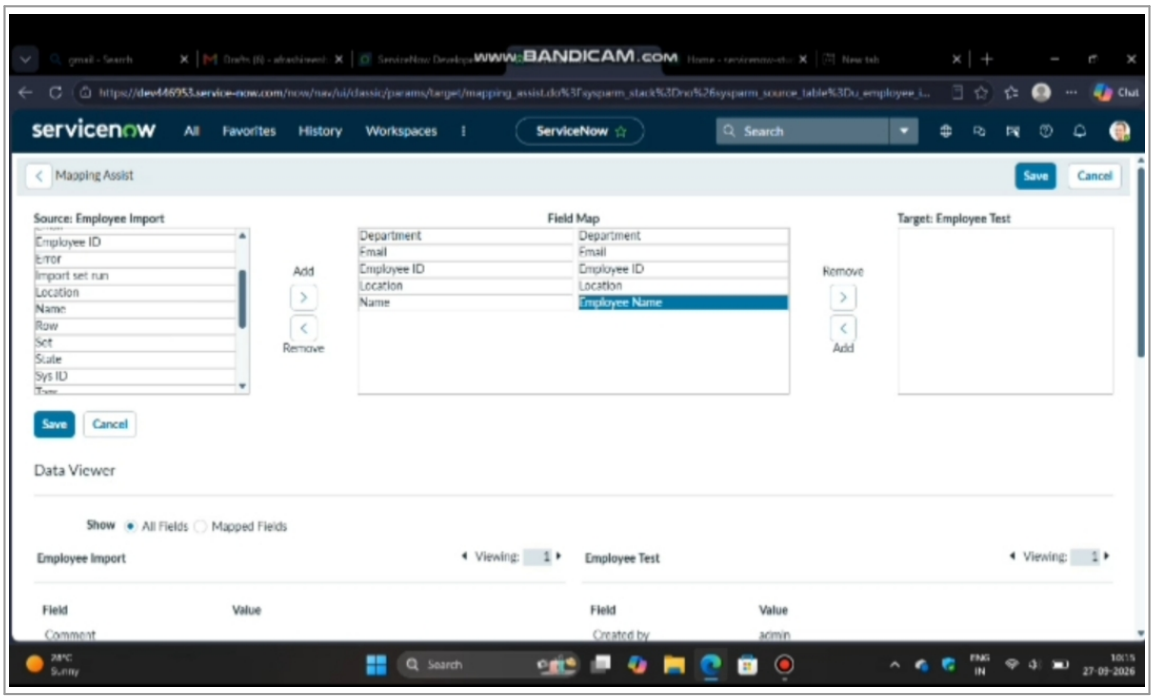

2. Submit the map, then use **Auto Map Matching Fields** under Related Links. Four field maps are created automatically: department, email, employee ID and location.

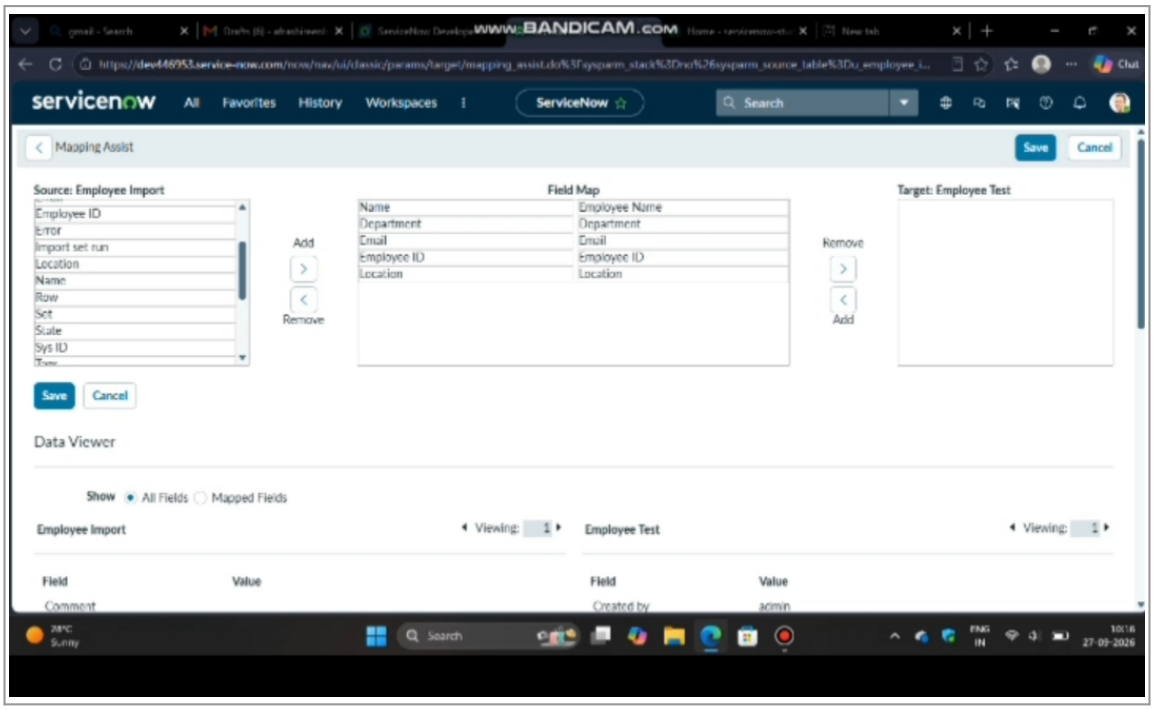

3. The Name column is not among the auto-mapped fields, so click **Mapping Assist** under Related Links.

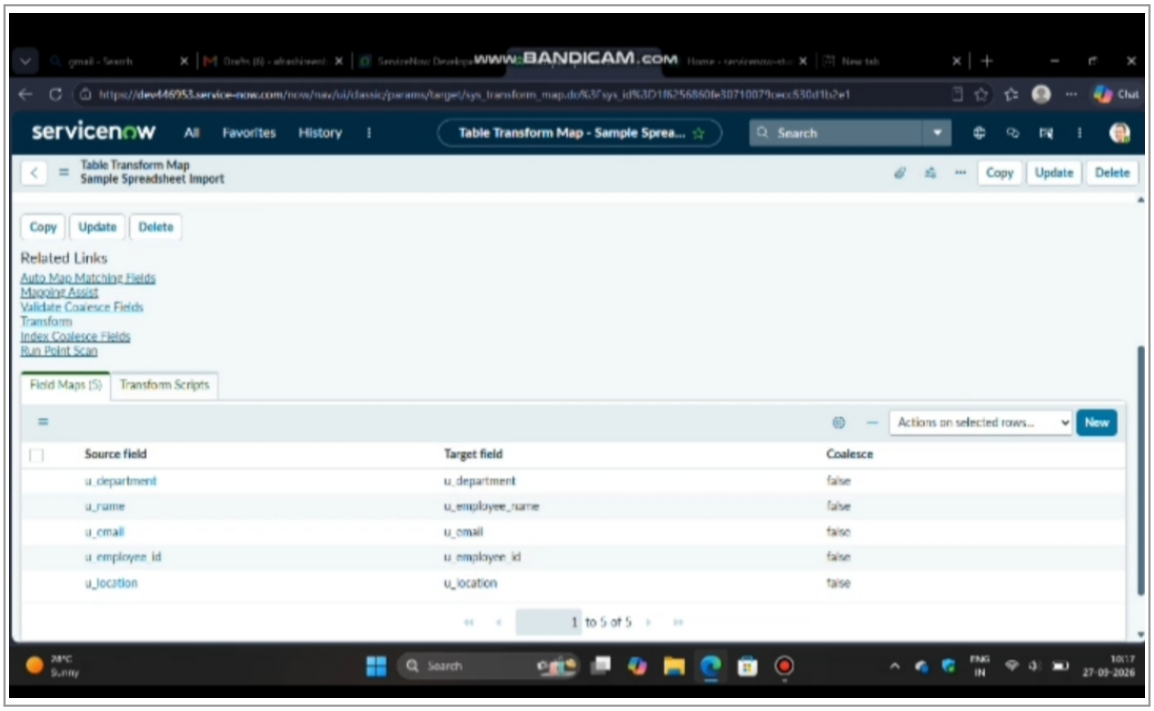

4. In Mapping Assist, map the source field **Name** to the target field **Employee Name**.

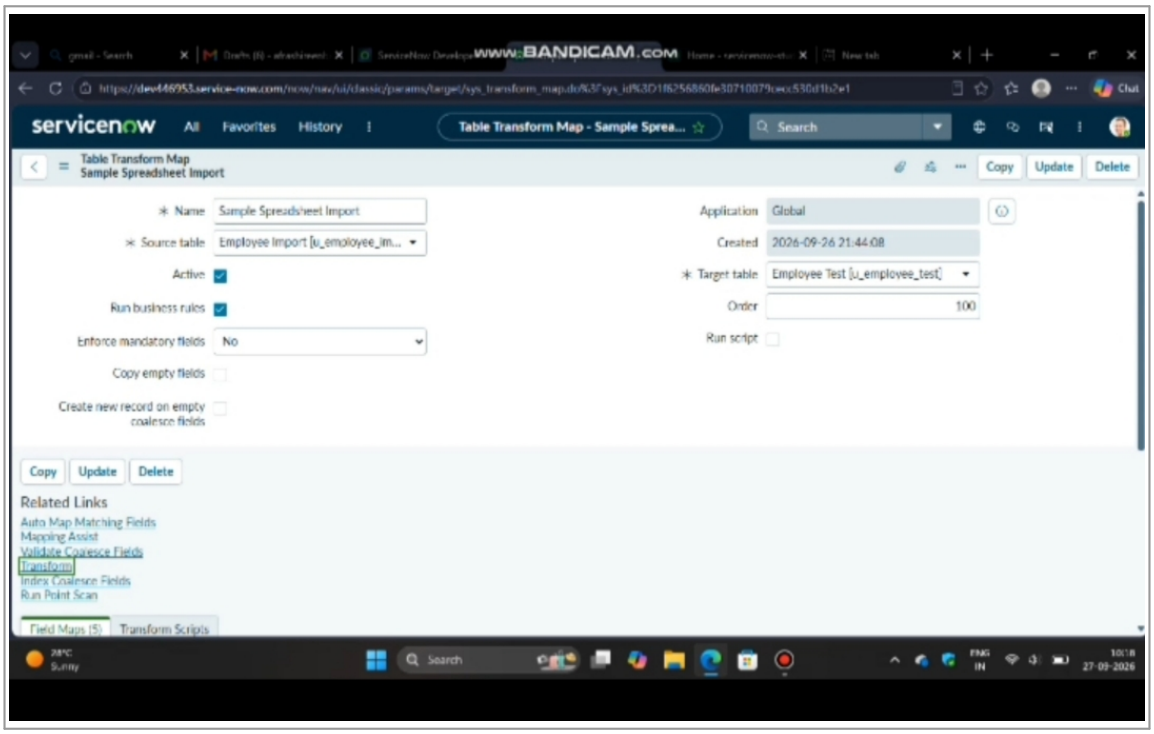

5. Click **Save**. The transform map now shows **5** field maps, including `u_name` to `u_employee_name`.

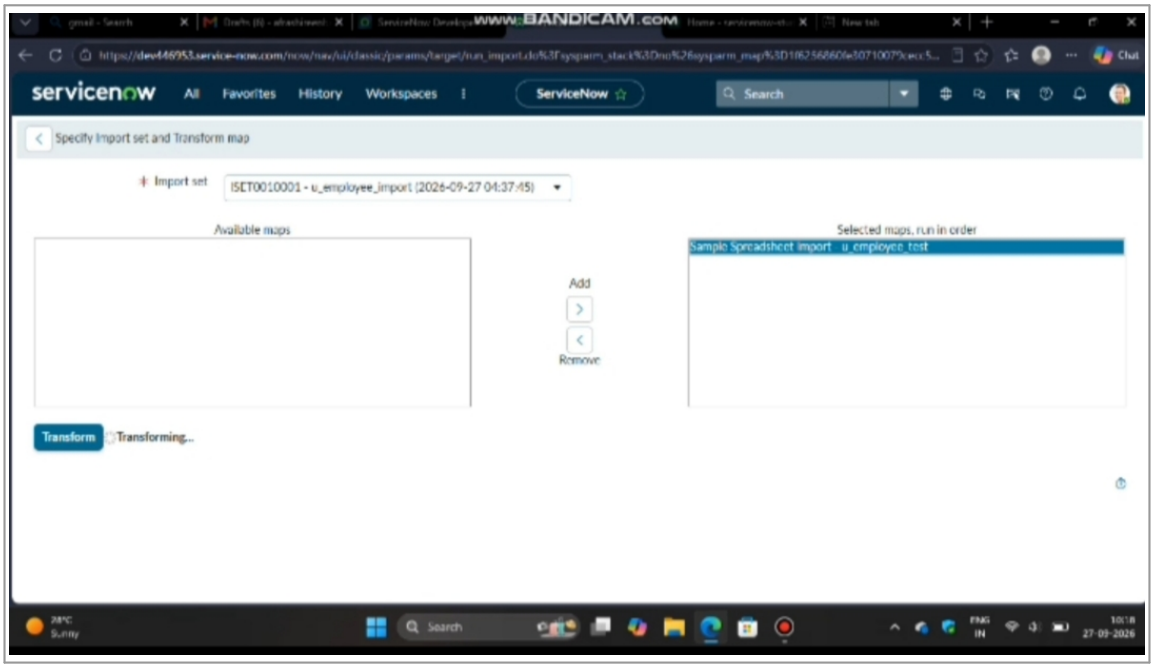

Phase 5: Run the Transform

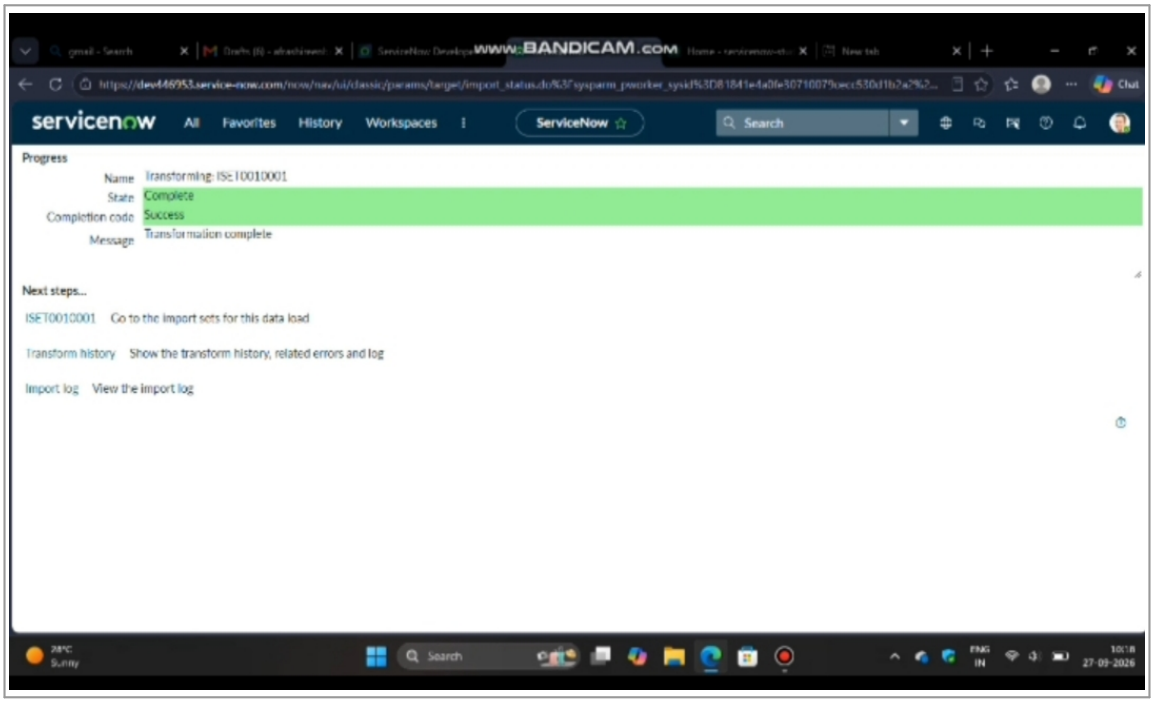

1. Open the saved transform map and click **Transform** under Related Links.

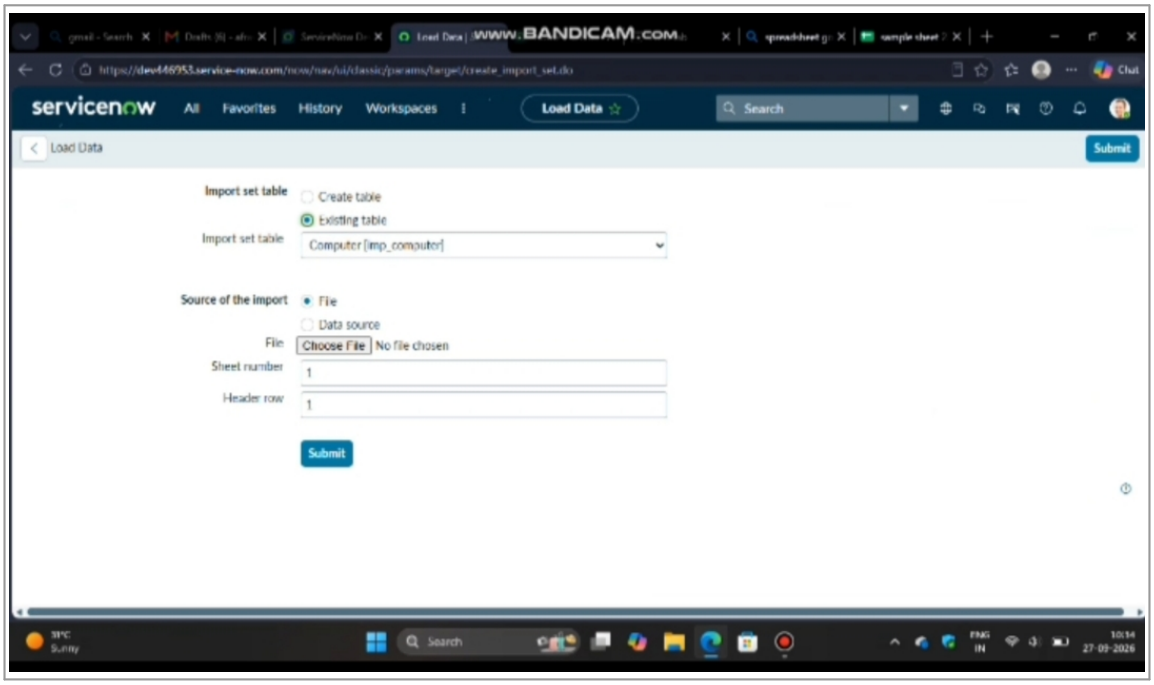

2. Select the import set (for example `ISET0010001 - u_employee_import`), make sure **Sample Spreadsheet Import** is in the selected maps, and click **Transform**.

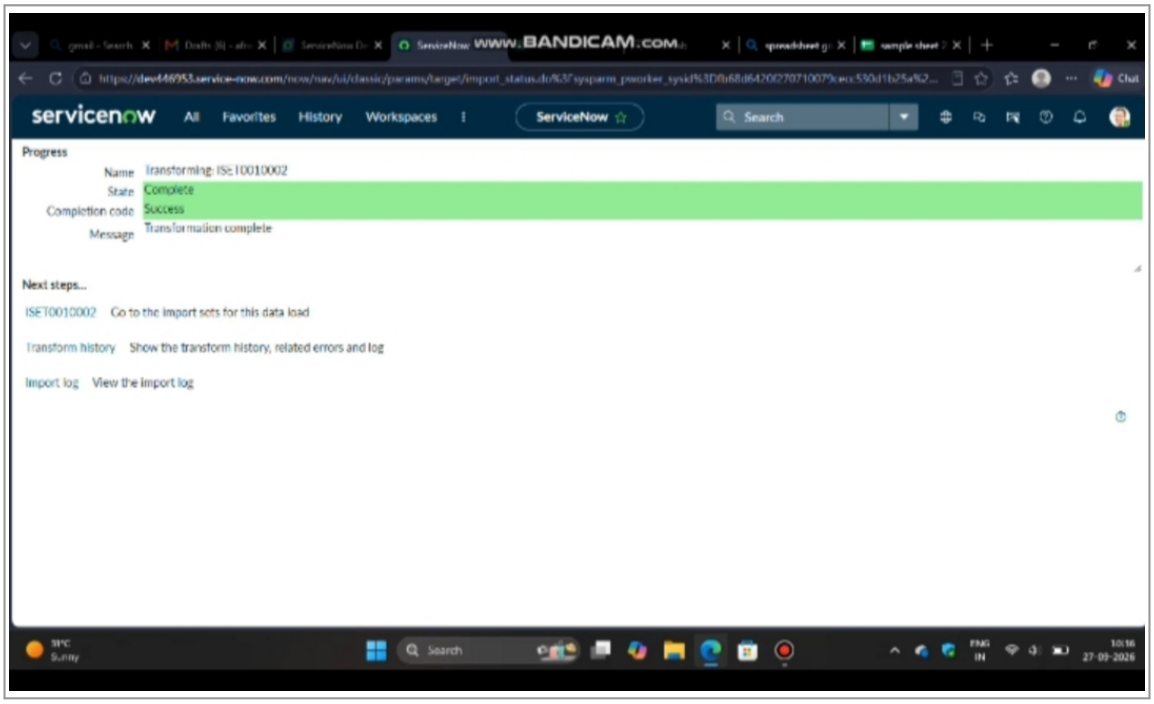

3. Wait for the progress page to show **State: Complete**, **Completion code: Success** and the message *Transformation complete*.

4. To bring in additional records, open **Load Data** again, choose the **Existing table** option, pick the import set table, select the file as the source, and click **Submit**.

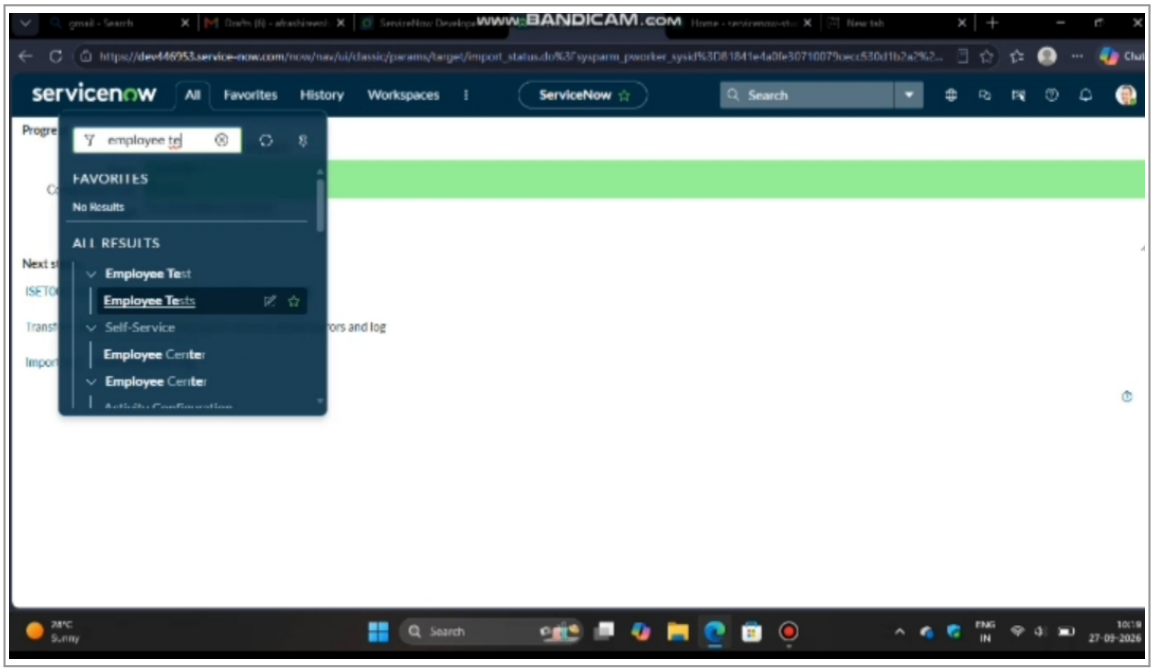

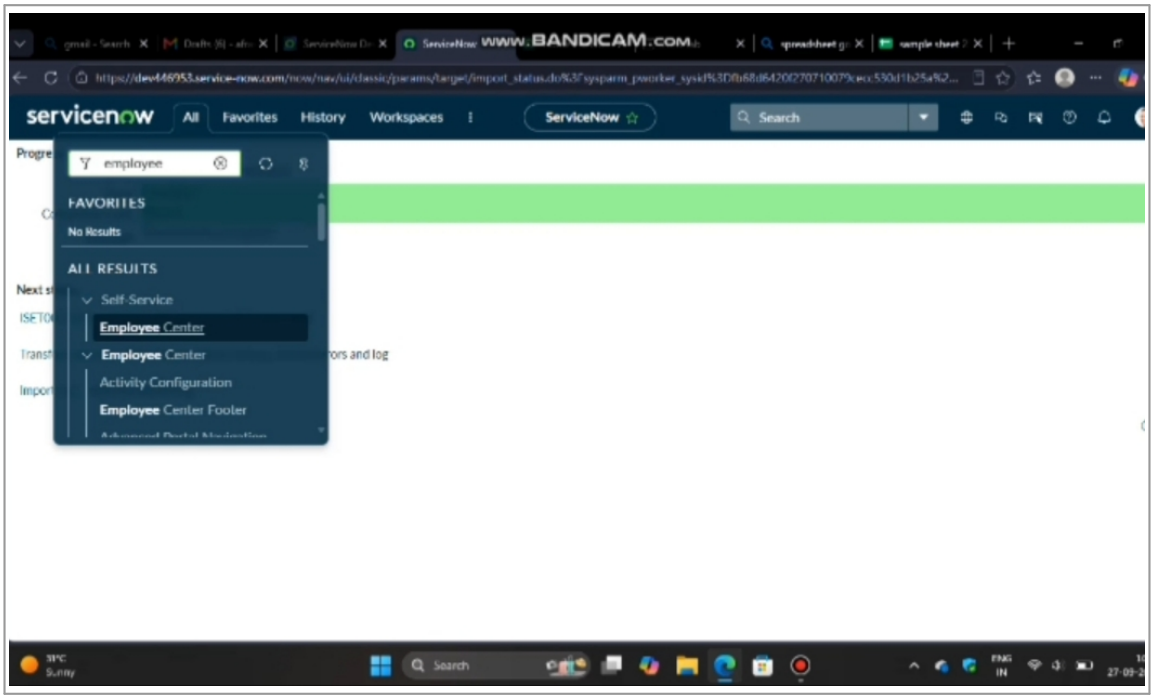

5. Run the transform on the new import set. It completes with **State: Complete** and **Completion code: Success** (import set `ISET0010002`).

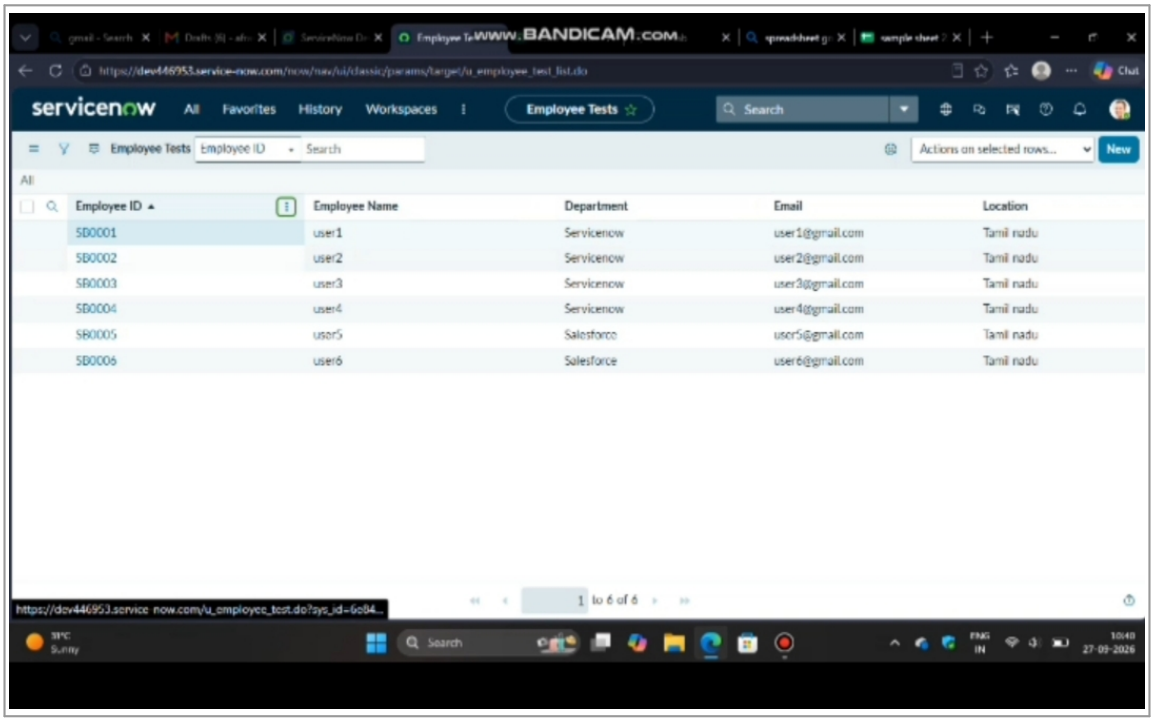

Phase 6: Navigation & Table Verification

1. In the ServiceNow Application Navigator, search for `employee` and select **Employee Tests** under Employee Test.

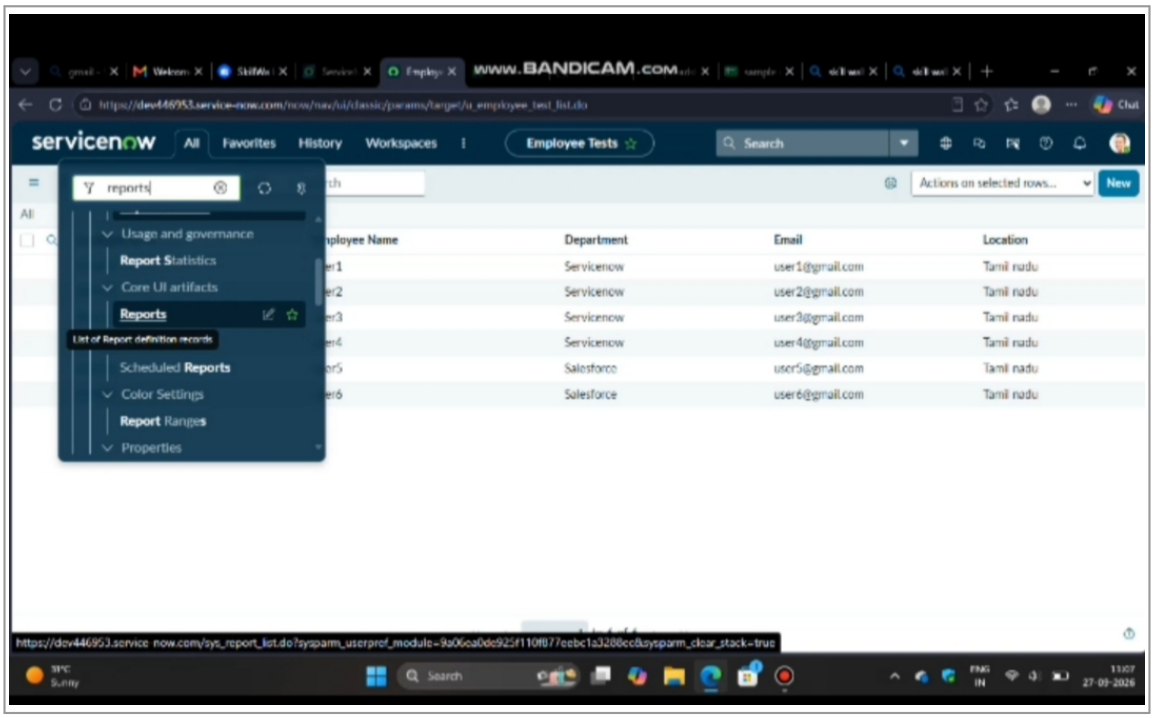

2. Open the **Employee Tests** table list view (`u_employee_test_list.do`) to verify that all records (`user1` to `user6`) have imported successfully with populated details for Employee ID, Name, Department, Email, and Location.

Phase 7: Create Reports

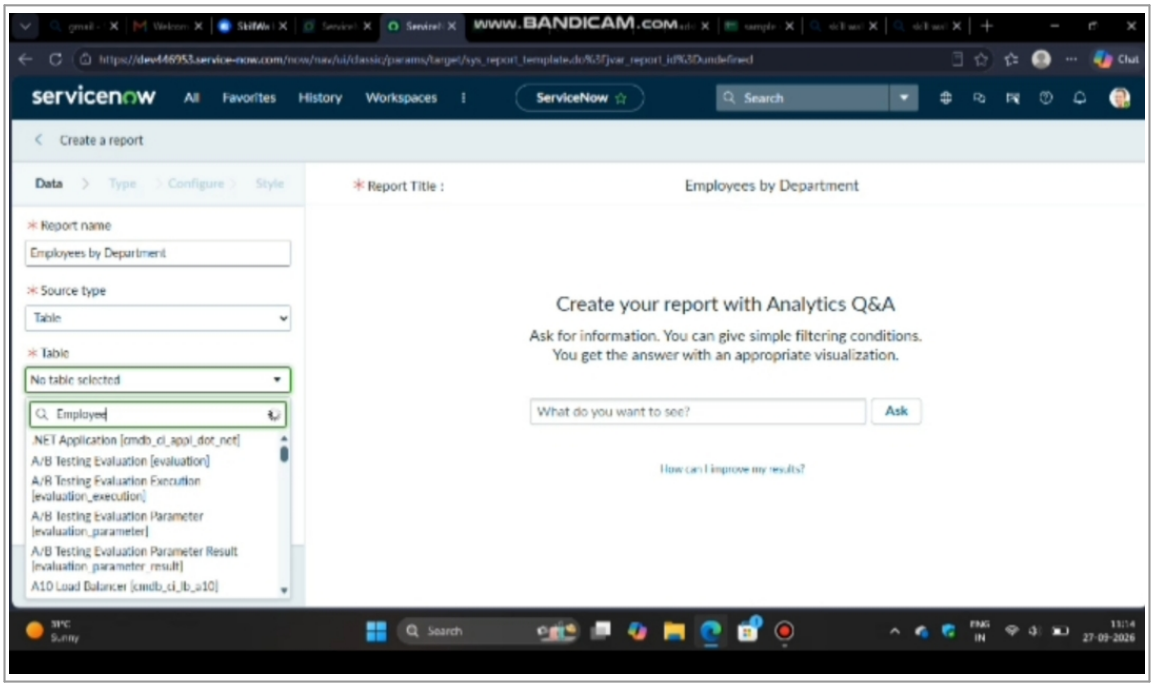

Report 1: Employees by Department (Pie Chart)

1. In the Application Navigator, search for `reports` and select **Reports** under Core UI artifacts.

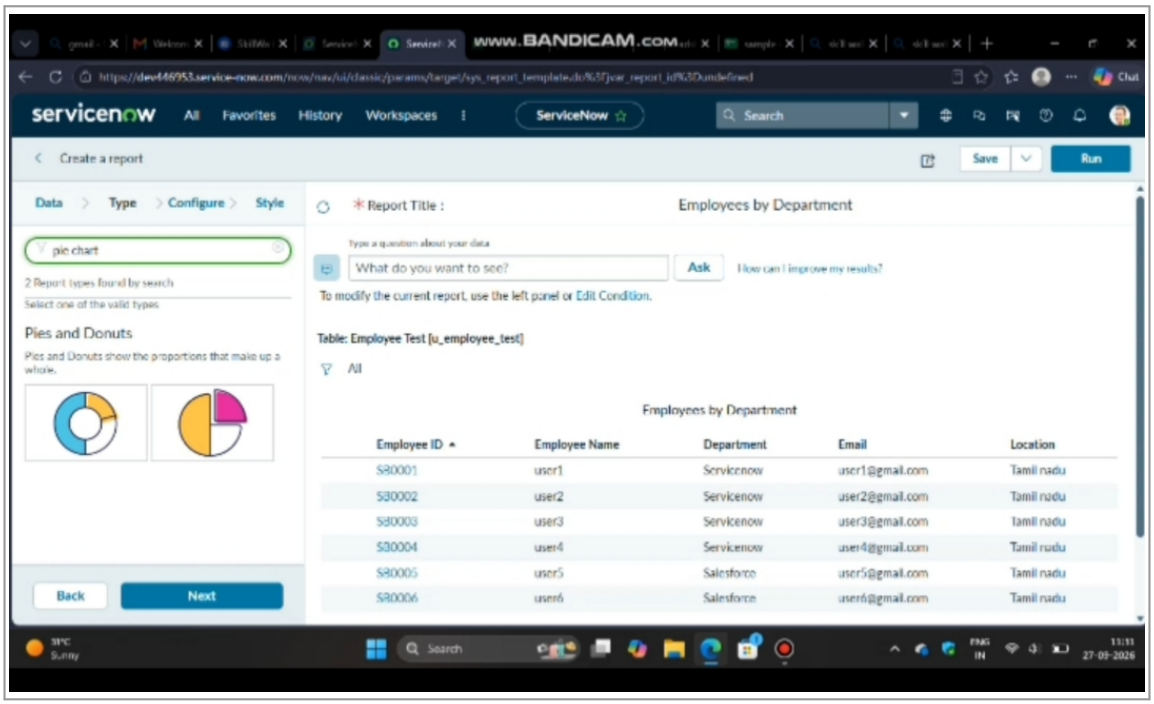

2. Configure the new report source details under the **Data** tab:

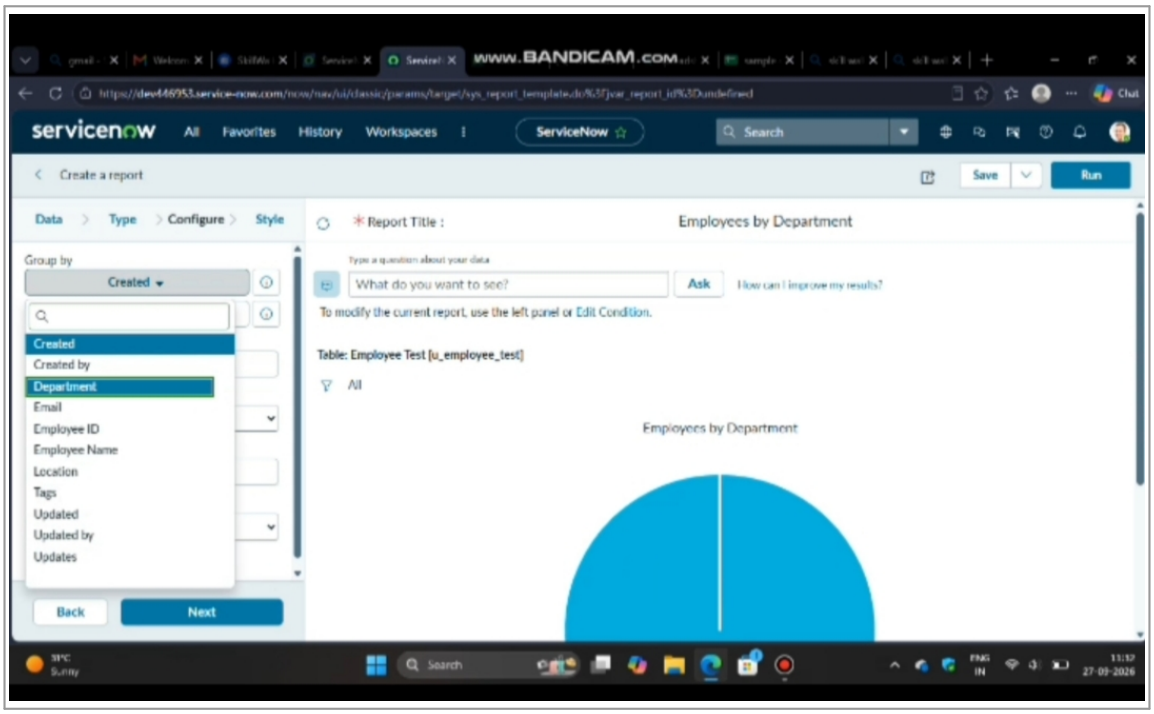

- **Report name:** Employees by Department
- **Source type:** Table
- **Table:** Select Employee Test [u_employee_test]

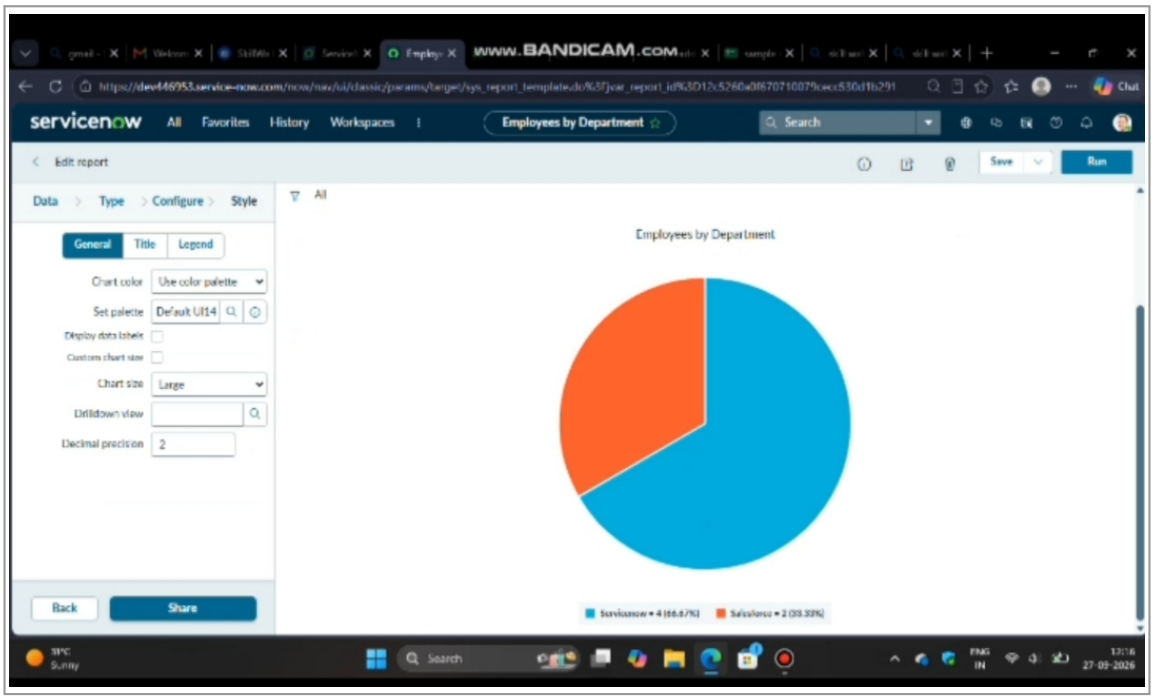

3. Move to the **Type** tab and choose **Pie chart** under Pies and Donuts.

4. Move to the **Configure** tab and set **Group by** to **Department**.

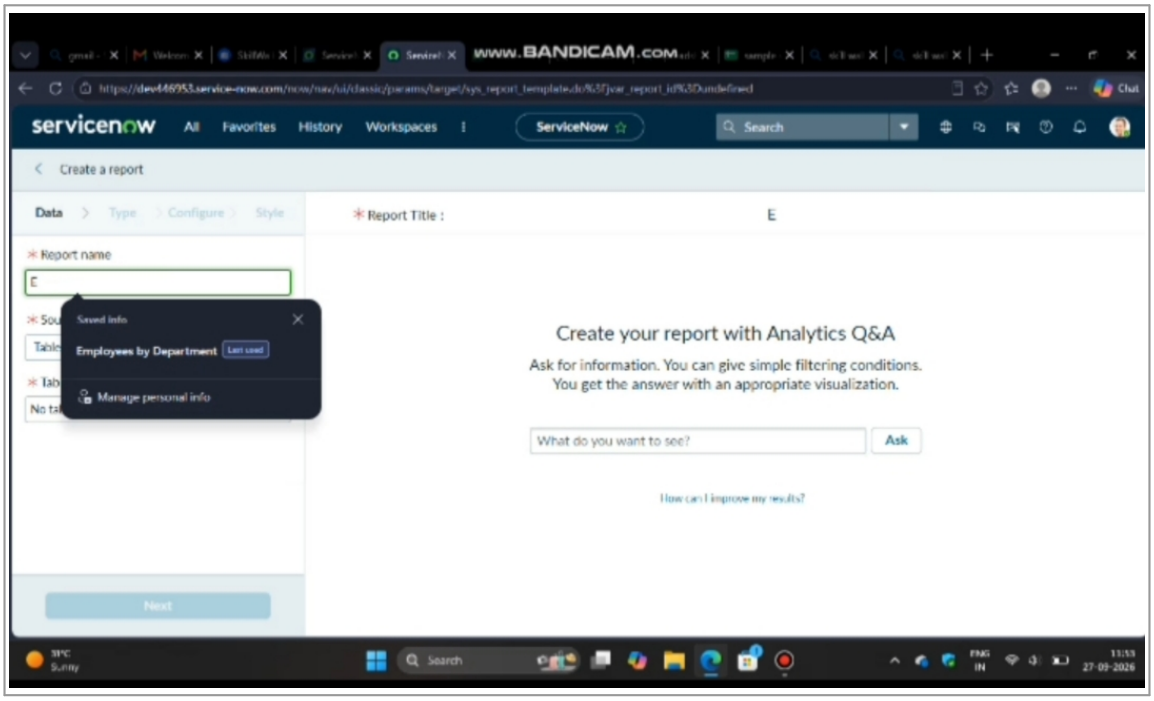

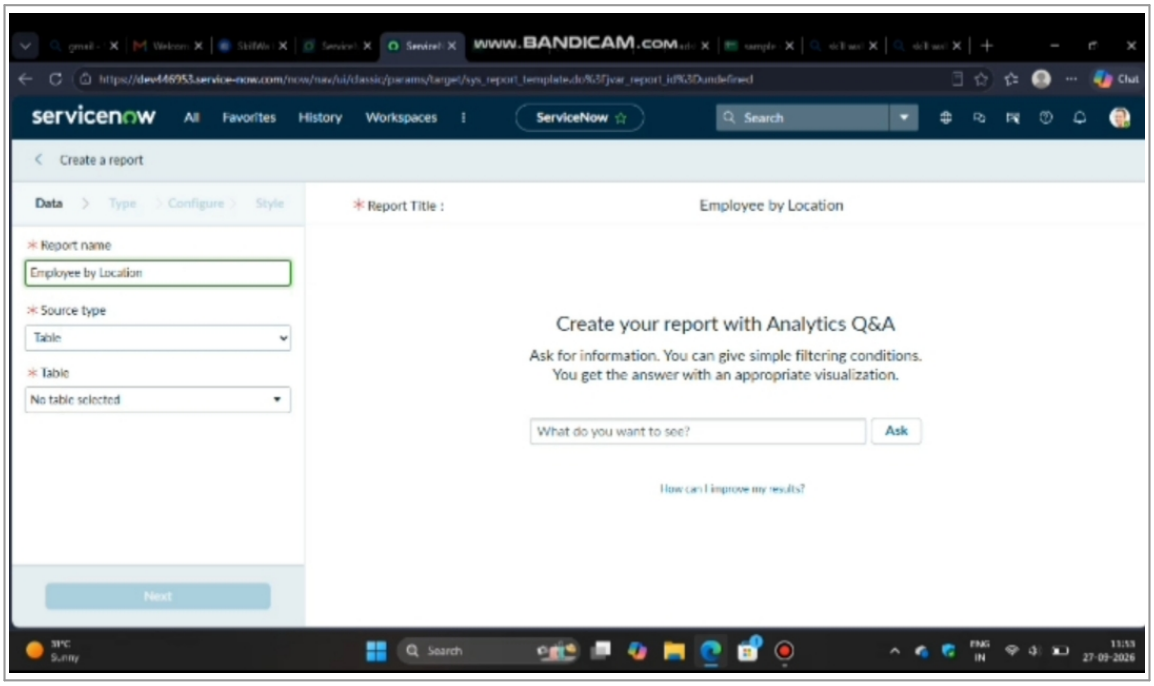

5. Review and refine the rendered pie chart output in the preview panel.

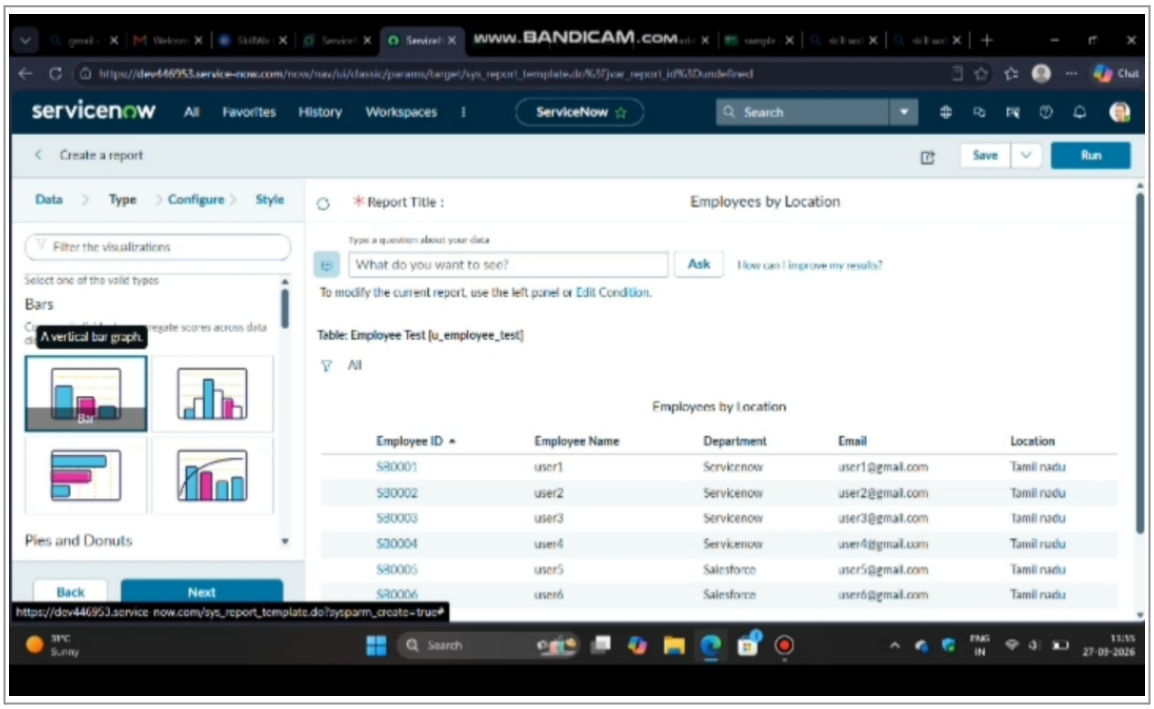

Report 2: Employees by Location (Bar Chart)

1. Create a new report and set the **Report name** to `Employees by Location` with `Table` as the source type.

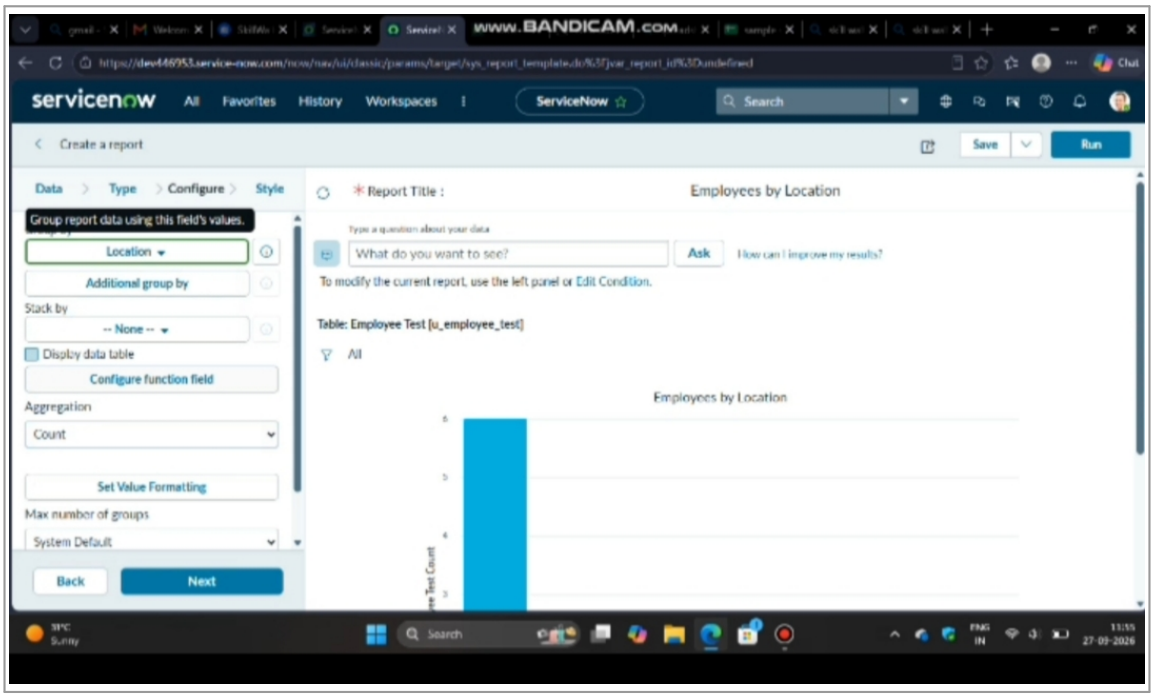

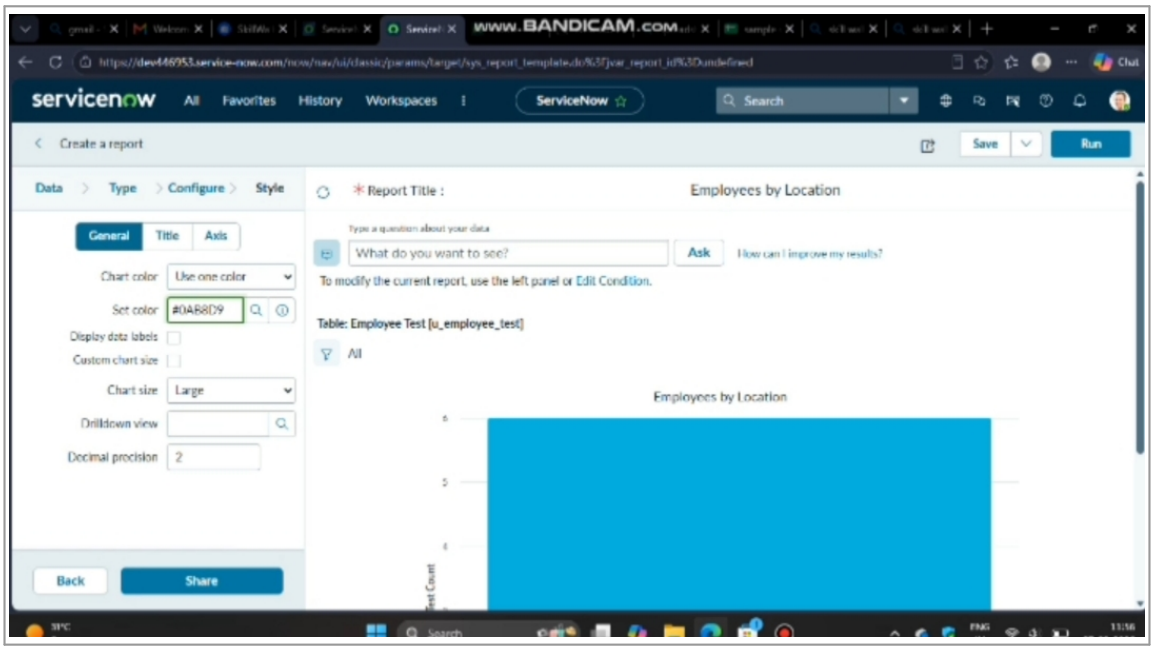

2. Under the **Type** step, select **Bar** under Bars.

3. Under the **Configure** step, set **Group by** to **Location**.

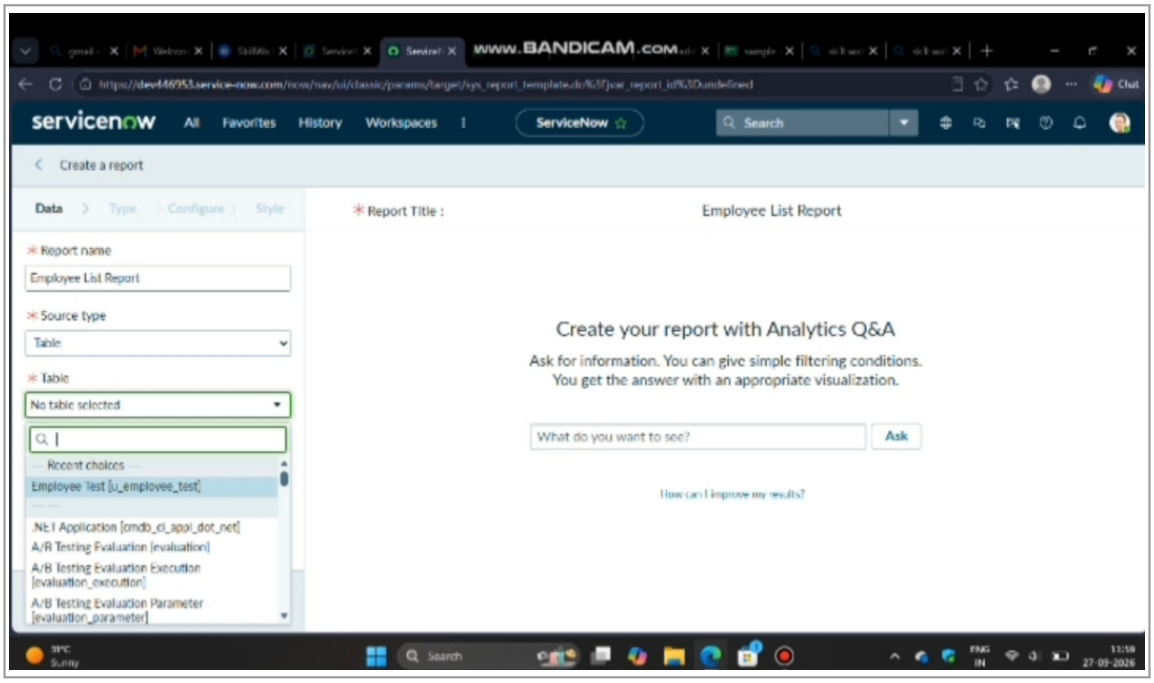

4. Under the **Style** step, customize chart colors and display properties.

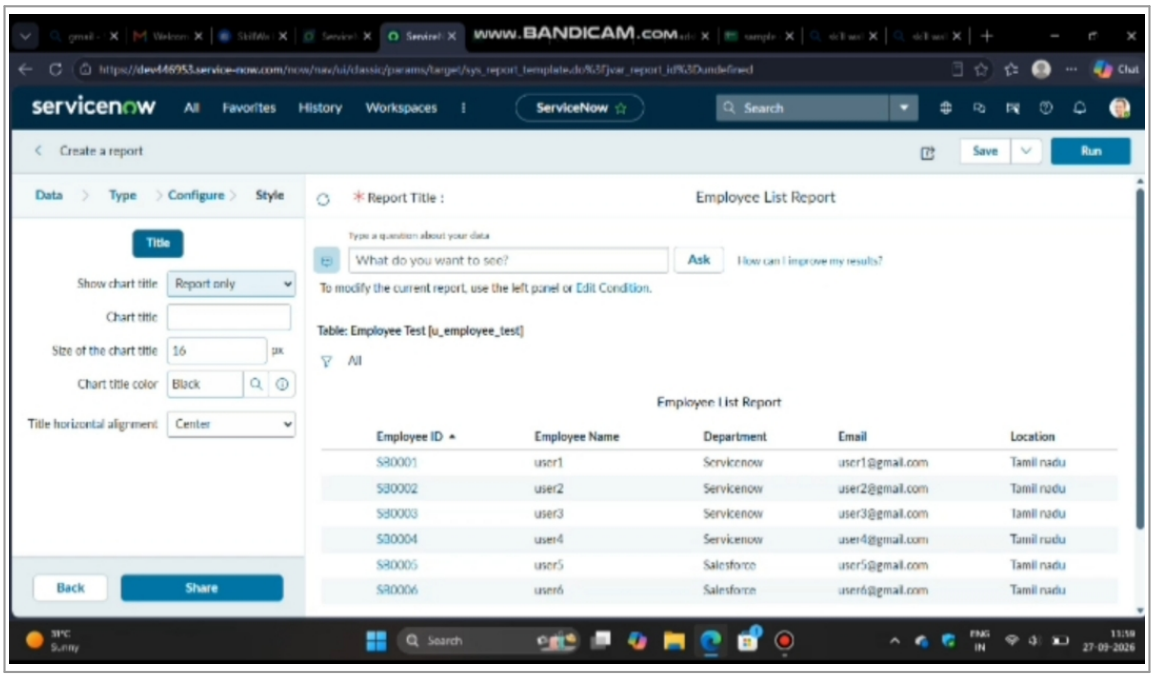

Report 3: Employee List Report

1. Create a third report titled `Employee List Report` and select `Employee Test [u_employee_test]` as the source table.

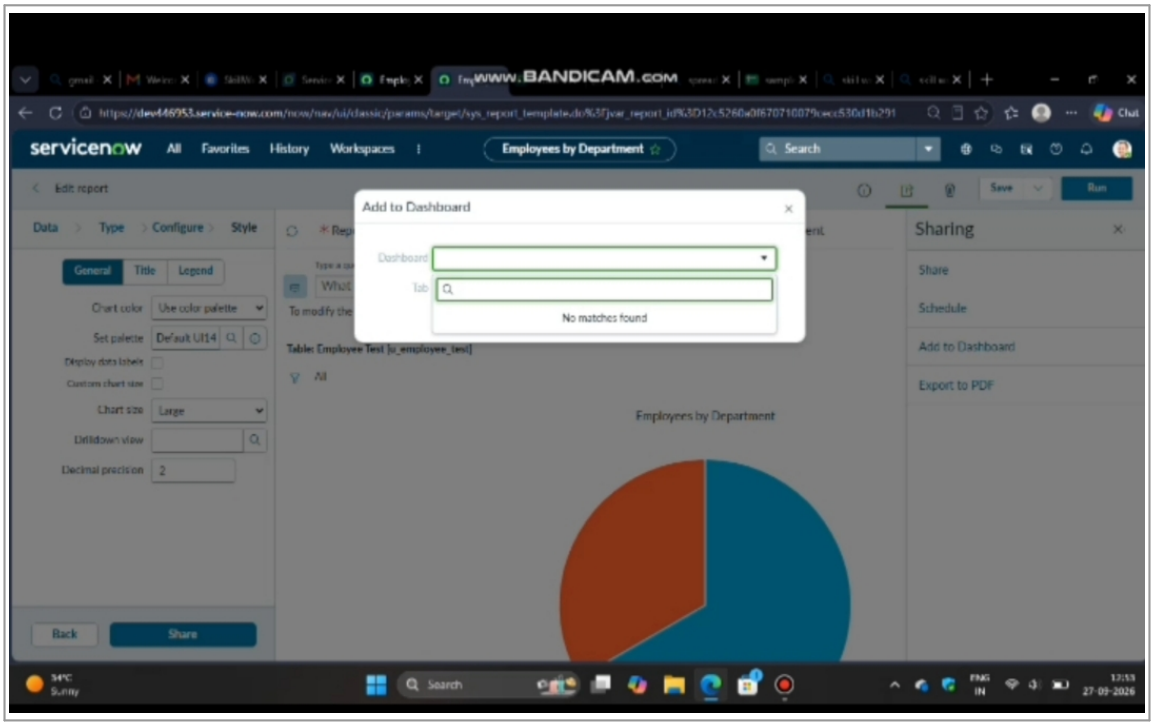

2. Configure title settings, font size, alignment, and preview the tabular output.

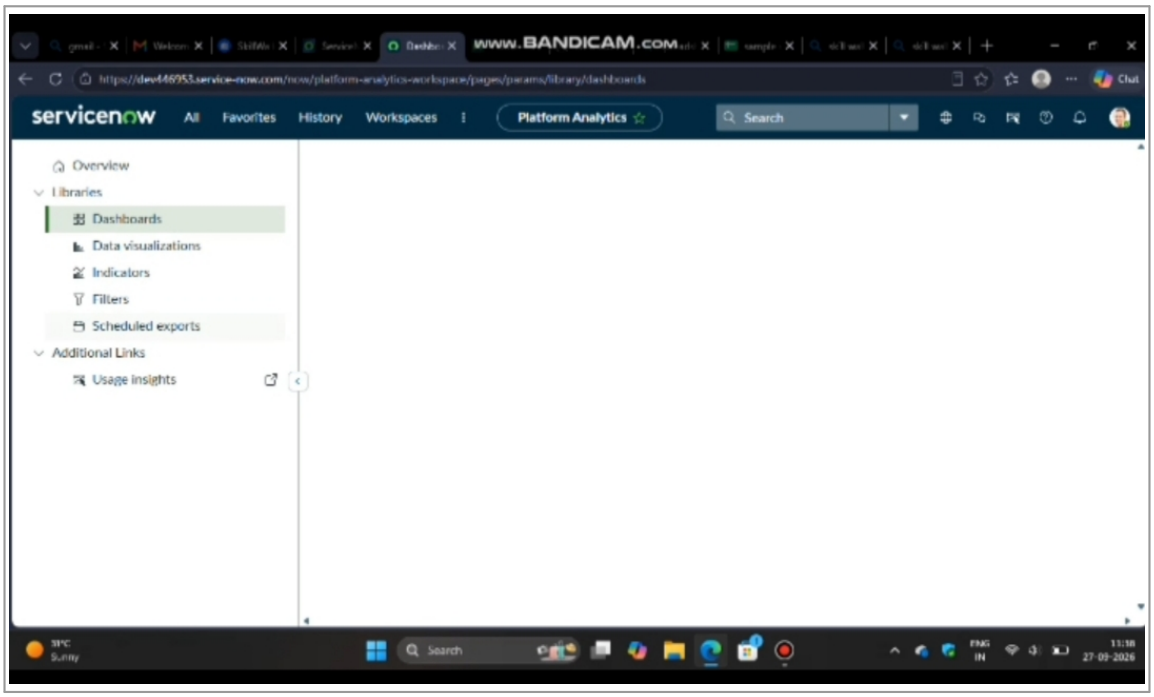

Phase 8: Platform Analytics & Dashboards

1. From any saved report, click **Share** > **Add to Dashboard** to link reports directly to an existing workspace.

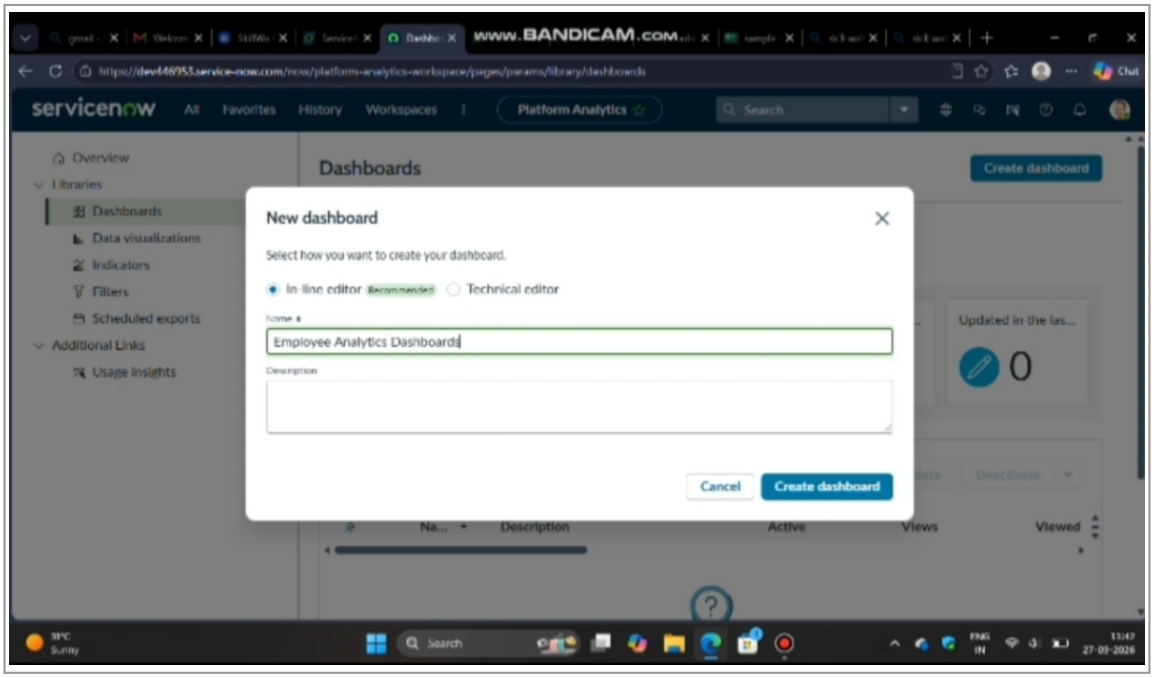

2. Navigate to **Platform Analytics** > **Dashboards** library.

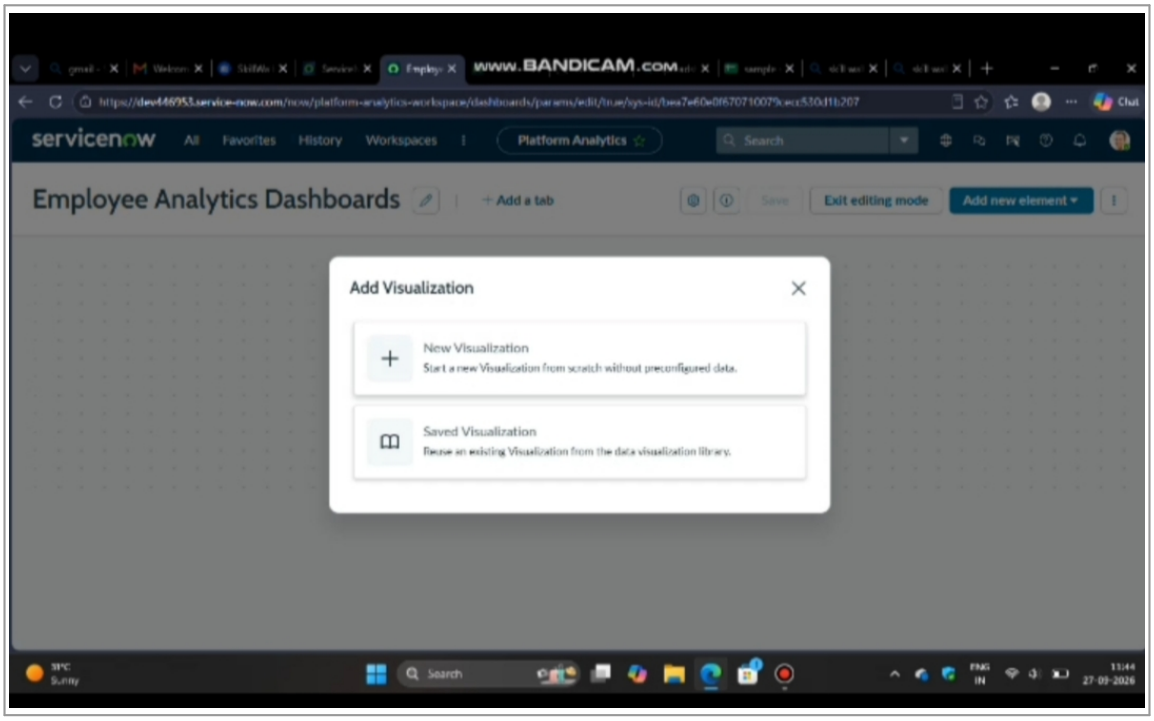

3. Click **Create dashboard** and fill in the workspace details:

- **Editor:** In-line editor (Recommended)
- **Name:** Employee Analytics Dashboards

4. Inside the **Employee Analytics Dashboards** workspace, click **Add new element** > **Add Visualization** to place saved or new visualizations on the dashboard canvas.

5. Result: the **Employees by Department** pie chart placed on the **Employee Analytics Dashboards** workspace (Servicenow = 4, 66.67%; Salesforce = 2, 33.33%). *Illustrative mock-up.*
